13. ABSTRACT (Maximum 200 words) In this fifteenth annual legislatively mandated report, 2003 and 2004 DUI data from diverse sources were compiled and cross-referenced for the purpose of developing a single comprehensive DUI data reference and monitoring system. This report presents crosstabulated information on DUI arrests, convictions, court sanctions, administrative actions and alcohol-involved crashes. In addition, this report provides 1-year proportions of DUI recidivism and crash rates for first and second DUI offenders arrested in each year over a time period of fourteen years. Also, the long-term recidivism curves of the cumulative proportions of DUI reoffenses are shown for all DUI offenders arrested in 1994. Analyses were conducted on the effectiveness of alcohol education programs upon the 1-year postconviction records of those convicted of the reduced charge of alcohol-related reckless driving, and on the effectiveness of the 3-month versus 6-month alcohol education programs on the 1-year postconviction records of first offenders. Two additional subanalyses were conducted to determine if differences on the outcome measures were related to BAC level (below .20 and .20 and above). The proportions of 2003 convicted first and second offenders who completed their alcohol education/treatment program requirement are also presented.

Admin per se/refusal susp/rev	184045	173696	180343	169511	175365	179332	172606	164840	165505	171470	171828
Postconviction susp/rev <sup>6</sup>	59600	52462	50257	35951 <sup>5</sup>	63247 <sup>5</sup>	56809	67991	66377	71098	69772	67752
Alcohol-involved fatalities	1488	1343	1254	1100	1072	1170	1233	1308	1416	1445	1462
% of total fatalities	35.3	32.2	31.6	30.0	31.0	32.8	33.1	33.3	34.2	34.2	35.7
Alcohol-involved injuries	39437	36961	35654	31189	30985	29833	30971	31806	32013	31322	31538
% of total injuries	12.5	12.1	11.9	10.9	10.7	10.3	10.2	10.4	10.4	10.2	10.4

<sup>1</sup>These totals do not include duplicate cases as originally reported in the Department of Justice, Criminal Justice Statistics Center, MARC data, and beginning with this report, the counts for all the years reflect this change.

<sup>2</sup>These data represent a DMV master file count of the number of DUI abstracts received (by year of violation), minus duplicates. Each year, the DUI abstracts are updated to include the amended and new abstracts for current and previous years. These additions are also reflected in changes for the percent convicted. These totals do not include conviction abstracts not yet received. Thus, for the most recent years, these figures will underestimate the final conviction totals.

<sup>3</sup>These totals were taken from the Research DUI data file and the DMV annual Suspension and Revocation reports and include late reporting of convictions from prior years.

<sup>4</sup>Since 1991, total mandatory suspension/revocation exceeds the number of DUI arrests because many offenders now receive both an APS and postconviction suspension/revocation.

<sup>5</sup>The 1997/1998 counts reflect backlogged actions from 1997 that were processed in 1998.

<sup>6</sup>These totals include suspension actions that are associated with lack of compliance with statutory requirements and include workload counts.

<sup>r</sup>Revised from prior reports.

## HIGHLIGHTS OF YEAR 2006 CALIFORNIA DUI-MIS REPORT

- ▶ Alcohol-involved traffic fatalities rose by 1.2% in 2004, continuing a reversal in trend that started in 1999 after well over a decade of continuous decline (see DUI Summary Statistics).
- ▶ The number of persons injured in alcohol-involved crashes increased by 0.7% in 2004, following a decrease of 2.2% in 2003, the first decrease in the last five years (see DUI Summary Statistics).
- ▶ DUI arrests decreased by 1.4% in 2004, following increases of 3.7% in 2003 and 0.3% in 2002 (see Table 1).
- ▶ The DUI arrest rate declined slightly in 2004, remaining relatively unchanged in the last four years, and represents 23% reduction from the arrest rate in 1994 (see DUI Summary Statistics).
- ▶ 14.3% of all 2003 DUI arrests were associated with a reported traffic crash, compared to 15.0% in 2002 (see Table 19). 42.6% of these crashes involved an injury or fatality, relatively unchanged from 42.8% in 2002 (see Table 20a).
- ▶ Among 2004 DUI arrestees, Hispanics (44.6%) again constituted the largest racial/ethnic group, as they have each year since 1992 (with the exception of 1999). Hispanics, however, continued to be arrested at a rate substantially higher than their estimated percentage of California's adult population (31.8% in 2004). The ethnic distribution among DUI arrestees who are convicted fairly closely parallels the ethnic distribution of the arrestees (see Figure 3).
- ▶ The average age of an arrested DUI offender in 2004 was 33.2 years. Less than 1% of arrested DUI offenders are juveniles (under age 18). This is shown in Table 3a.
- ▶ Among convicted DUI offenders in 2003, 77.1% were first offenders and 22.9% were repeat offenders (one or more prior convictions within the previous 7 years). The proportion of repeat offenders has decreased considerably since 1989, when it stood at 37% (see Table 10).
- ▶ The average blood alcohol concentration (BAC) of a convicted DUI offender, as reported by law enforcement on APS forms, was .161% in 2003, down slightly from the last several years, yet more than double the California illegal per se BAC limit of .08% (see Table 9a).
- ▶ 11.1% of 2003 DUI arrest cases did not show any corresponding conviction on DMV records, slightly higher than for 2002 DUI arrests (see Table 8).

## ACKNOWLEDGMENTS

The authors acknowledge with appreciation the many individuals who have contributed to the success of this project. In particular, we wish to acknowledge the cooperation of the Department of Justice, Criminal Justice Statistics Center, in providing annual DUI arrest data and documentation. The contributions of Debbie McKenzie, Associate Governmental Program Analyst, in transforming mainframe computer files into readable data tables and figures, as well as her general assistance in the production of this report, are acknowledged with appreciation. We also would like to acknowledge the contributions of Patrice Rogers, Research Program Specialist II, Kevin L. Nguyen, Staff Programmer Analyst, Leonard A. Marowitz, Research Manager II, Alcohol/Drug Projects, and David J. DeYoung, Chief, Research and Development Branch.

## INTRODUCTION

This report is the fifteenth Annual Report of the California DUI Management Information System, produced in response to Assembly Bill 757 (Friedman), Chapter 450, 1989 legislative session (see Appendix A). This bill required the Department of Motor Vehicles (DMV) to "establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted" of DUI in order to provide "accurate and up-to-date comprehensive statistics" to enhance "the ability of the Legislature to make informed and timely policy decisions." The need for such a data system had long been documented by numerous authorities, including the 1983 Presidential Commission on Drunk Driving. In responding to this legislative mandate, this report combines and cross-references DUI data from diverse sources and presents them in a single reference. Data sources drawn upon include the California Highway Patrol (CHP) for crash data, Department of Justice (DOJ) for arrest data, and the DMV driver record database. Each of these reporting agencies, however, initially draw their data from diffuse primary sources such as individual law enforcement agencies (arrest and crash reports) and the courts (abstracts of conviction).

The general conceptual design of the California DUI management information system (DUI-MIS) is presented in Figure 1. The basic theme of the DUI-MIS is to track the processing of offenders through the DUI system from the point of arrest and to identify the frequency with which offenders flow through each branch of the system process (from law enforcement through adjudication to treatment and license control actions). Figure 1 also illustrates the relationship between offender flow and data collection at each point of the process. The initiating data source for the DUI-MIS is the DUI arrest report, as compiled by the DOJ Law Enforcement Information Center's Monthly Arrest and Citation Register (MACR) system.

Another major objective of this report is to evaluate the effectiveness of court and administrative sanctions on convicted DUI offenders. This is accomplished by examining the postconviction recidivism records (alcohol/drug-related crashes and traffic convictions) of offenders assigned to alternative sanctions, as detailed in Section 4 on "Postconviction Sanction Effectiveness."

Figure 1. DUI management information system.

It should again be noted that it is not an objective of this report to make recommendations based on the data presented. Rather, the primary purpose of a reporting system such as the DUI-MIS is to provide objective data on the operating and performance characteristics of the system for others to assess in making policy decisions, formulating improvements and conducting more in-depth evaluations.

The DUI-MIS data system and report has led to numerous improvements in the California DUI system, from the identification of inappropriate dismissals in a small central valley court to major initiatives to improve the tracking and reporting of DUI cases. The success of the California DUI-MIS has also contributed to a national initiative to design a model DUI reporting system, developed under contract to the National Highway Traffic Safety Administration (NHTSA).

## SECTION 1: DUI ARRESTS

The information presented below on DUI arrests is based primarily on data collected annually by the Department of Justice (DOJ), Criminal Justice Statistics Center, Monthly Arrest and Citation Register (MACR) system. These data are the most current nonaggregated data available on DUI arrests.

Table 1: DUI Arrests by County and Annual Percentage Change from 2002-2004. The number of DUI arrests by county for the years 2002-2004 and the percentage change from 2003-2004 are shown in Table 1.

Table 2: 2004 DUI Arrests by County and Type of Arrest. This table shows a breakdown of 2004 DUI arrests by felony, misdemeanor, and juvenile arrest type, by county. The table also shows county and statewide DUI arrest rates per 100 licensed drivers.

Tables 3a and 3b: 2004 DUI Arrests by Age, Sex, and Race/Ethnicity. Table 3a crosstabulates age by sex and age by race/ethnicity of 2004 DUI arrestees statewide. The same tabulations by county are found in Appendix Table B1. Table 3b shows the same data crosstabulated by sex and age within race/ethnicity.

Figure 2 below displays the trend in DUI arrests from 1994 to 2004.

*Figure 2.* DUI arrests 1994-2004.

Based on the data shown in Figure 2 and previously listed tables, the following statements can be made about DUI arrests in California:

#### Statewide Parameters:

- ▶ DUI arrests decreased by 1.4% in 2004, following increases of 3.7% in 2003 and 0.3% in 2002 (see Table 1).
- ▶ The per capita DUI arrest rate was 0.8 in 2004 (as it was in 2000-03, but down from 0.9 in 1997-99). This represents over a 50% reduction from the 1.8 rate in 1990 (see Table 2).
- ▶ The percentage of DUI arrests that were felonies (involving bodily injury or death) decreased slightly from 3.2% in 2003 to 3.1% in 2004; felony DUI arrests continue to constitute a relatively small percentage of all DUI arrests (see Table 2).

#### County Variation:

- ▶ 20.3% of all 2004 California DUI arrests occurred in Los Angeles County. Four counties (Los Angeles, San Diego, Orange, and San Bernardino) had over 10,000 DUI arrests each, accounting for 43.2% of all arrests (see Table 2).
- ▶ The 2004 county per capita DUI arrest rates ranged from 0.3 to 3.8 DUI arrests per 100 licensed drivers. Eight counties again had rates of 0.7 or below. These low per capita arrest rate counties were San Francisco (0.3), Contra Costa, Los Angeles, Santa Clara and Solano (0.6), Alameda, Orange, and San Mateo (0.7). Five counties had rates of 2.0 or higher—Alpine (3.8), Glen and Sierra (2.5), Colusa and Del Norte (2.1). This is shown in Table 2.
- ▶ As in past years, many counties again showed a decline in DUI arrests in 2004. Among the larger counties, the greatest percentage declines occurred in Sacramento (-10.9%) and Contra Costa (-10.1%). Among smaller counties, the largest percentage decreases in DUI arrests occurred in Tehama (-45.5%), Lassen (-43.8%), Alpine (-32.2%), Yuba (-17.9) and Mono (-17.7%). Among counties showing percentage increases in DUI arrests were Amador (47.7%), Calaveras (26.7%), and Plumas (25.1%). This is shown in Table 1.

#### Demographic Characteristics:

- ▶ The average age of a DUI arrestee in 2004 was 33.2 years. After increasing each year during the early 1990's, the average age of a DUI arrestee has declined slightly each year since 1997. Roughly half (50.2%) of all arrestees were age 30 or younger and almost three-quarters (74%) were age 40 or younger. Less than 1% of all DUI arrests involved juveniles (under age 18). 2.2% of all arrestees were over age 60 (see Table 3a).

- ▶ Males comprised 83% of all 2004 DUI arrests (see Table 3a). The proportion of females among DUI arrestees has risen slightly each year this report has been produced, from 10.6% in 1989 to 17% in 2004.
- ▶ In 2004, Hispanics (44.6%) again represented the largest ethnic group among DUI arrestees as they have each year since 1992 (with the exception of 1999, when Whites were the largest group at 42.8%). Hispanics, however, continued to be arrested at a rate substantially higher than their estimated 2004 population parity of 31.8% (Department of Finance, Demographic Research and Census Data Center). Blacks were also slightly overrepresented among DUI arrestees (7.0% of arrests, 6.5% of the population), while other racial/ethnic groups were underrepresented among DUI arrestees, relative to their estimated 2004 population parity. These underrepresented groups were Whites (41.8% of arrests, 47.4% of the population), and "Other" (6.6% of arrests, 14.3% of the population). This is shown in Table 3a and Figure 3.
- ▶ Among male 2004 DUI arrestees, 49.1% were Hispanic, 37.5% were White, 6.9% were Black, and 6.5% were "Other." Among female DUI arrestees, 62.8% were White, 22.5% were Hispanic, 7.6% were Black, and 7.1% were "Other." The overrepresentation of Hispanics among DUI offenders is clearly limited to males (see Table 3b).
- ▶ In the following 7 counties, Hispanics comprised 60% or more of those arrested for DUI during 2003: Tulare (74.5%), Merced (67.0%), Fresno (65.9%), San Benito (62.7%), Imperial (69.5%), Monterey (67.7%) and Madera (65.8%). In most other counties, the majority of arrestees were White (see Appendix Table B1).
- ▶ The average age of a DUI arrestee varied considerably by race: Blacks were the oldest with a mean age of 35.7 years, while Hispanics were the youngest, with a mean age of 31.1 years (see Table 3a).

Figure 3. Percentage of 2004 DUI arrests and 2004 projected population (age 15 and over, based on the 2000 census) by race/ethnicity.

## SECTION 2: CONVICTIONS

Data on convictions resulting from court adjudication of DUI arrests are reported directly to the Department of Motor Vehicles (DMV) on court abstracts of conviction. Although 2004 arrest data are reported earlier, conviction data for those arrested in 2003 are reported here to allow sufficient time for courts to report convictions to DMV. The following tables compile and crosstabulate these conviction data by demographic, geographic, and adjudicative categories. In what follows, expressions like "2003 convictions" refer to DUI offenders arrested in 2003, who were subsequently convicted.

Table 4: 2003 DUI Convictions by Age and Sex. This table crosstabulates statewide DUI conviction information by age and sex. Corresponding county-specific conviction data are presented in Appendix Table B2.

Table 5: Matchable 2003 DUI Convictions by Age, Race/Ethnicity, and Sex. This table displays DUI conviction information by age, race/ethnicity, and sex. "Matchable" DUI convictions are those which are traceable to a DUI arrest appearing on the MACR system. Because not all arrests could be matched to an existing record, these conviction totals underestimate the total number of actual convictions.

Table 6: Adjusted 2003 DUI Conviction Rates and Relative Likelihood of Conviction by Age and Race/Ethnicity. This table shows the relative probability of a DUI arrest leading to a DUI conviction by age and race/ethnicity. DUI conviction totals from categories in Table 5 ("matchable DUI convictions") were increased by the proportion which matchable convictions constituted of "total DUI convictions," shown in Table 7, to arrive at the adjusted DUI conviction rates. As explained above, without this adjustment DUI conviction rates would be underestimated using the conviction data from Table 5 because not all reported convictions are "matchable" to an arrest.

Table 7: Total Conviction Data for 2003 DUI Arrestees. This table portrays county and statewide DUI-related conviction data as reported to the DMV on court abstracts of conviction. Corresponding court-specific data are shown in Appendix Table B3. Convictions not reported to DMV are considered nonconvictions for the purposes of this report. Actual nonconvictions include cases where the DUI arrest was not filed, not prosecuted, or resulted in a not-guilty verdict. The DUI conviction rates by county were calculated by comparing the county conviction totals with DOJ arrest totals. Because not all 2003 DUI arrests have yet been adjudicated, these conviction totals and rates will slightly underestimate the "final" figures. The DUI conviction rates shown in the "DUI Summary Statistics: 1994-2004" table at the very beginning of this report

include an estimate of these late convictions, and thus are slightly higher than those shown in Tables 7 and 8. Conviction variables include felony and misdemeanor DUI convictions, alcohol- and nonalcohol-related reckless driving convictions, convictions of "other" lesser offenses, and DUI convictions dismissed or found unconstitutional. DUI arrest dates from the DOJ MACR system were matched to driver record violation dates to identify nonalcohol-related reckless driving and "other" convictions. The average (mean) adjudication time lags from DUI arrest to conviction, and from conviction to update on the DMV database, were calculated for each county.

Table 8: Adjudication Status of 2003 DUI Arrests by County. This table shows the adjudication status (court disposition) of 2003 DUI arrests, by county. Included are the percentages of arrests which have resulted in DUI convictions (misdemeanor or felony), reckless driving convictions (alcohol-related or nonalcohol-related), convictions of "other" offenses, or no reported conviction, as of the date of writing. Again, because not all 2003 DUI arrests have yet been adjudicated, these rates will slightly underestimate the "final" rate for each category, except for the category "no record of any conviction," which will be slightly reduced (approximately 1-2%) by the eventual adjudication of these few late cases.

Table 9a: 2003 Reported Blood Alcohol Concentration (BAC) Levels of DUI Convictions and Table 9b: 2003 Reported Blood Alcohol Concentration (BAC) Levels of Convicted DUI Offenders Under Age 21. Table 9a shows the frequency of reported positive BAC levels for DUI and alcohol-reckless convictions. Because of more complete reporting of BAC levels on APS reporting forms (79.7%) than on abstracts of conviction, those reports are used to calculate statewide BAC levels. Abstracts of conviction, which were used in prior evaluations, report BAC levels in only 54.3% of cases. Table 9b shows the BAC distribution for convicted arrestees under age 21.

Table 10: 2003 DUI Convictions by Offender Status and Average Reported BAC Level. This table displays the proportions of convicted DUI offenders by offender status (number of prior convictions in seven years), and the average (mean) BAC level from APS reporting forms and abstracts of conviction, for each offense level.

Figure 4 (below) shows, for the years 1994 to 2004, the number of DUI abstracts received to date by DMV from the courts, and conviction rates based on the data received as of September 2005.

Figure 4. DUI abstracts received by DMV and conviction rates, 1994-2004.

Based on these data, the following statements can be made:

**Statewide Adjudication Parameters:**

- ▶ 77% of 2003 DUI arrests resulted in convictions of DUI offenses.
- ▶ 10.2% of 2003 DUI arrests resulted in reckless driving convictions, and 17.7% (1.8%/10.2%) of these DUI arrestees were eventually convicted of a nonalcohol-related reckless violation (see Table 8).
- ▶ 1.9% of 2003 DUI arrests have resulted in convictions of offenses other than DUI or reckless driving, which is the same as last year (see Table 8).
- ▶ 11.1% of 2003 DUI arrests have not yet resulted in any conviction on DMV's records, up from 10.9% in 2002, and down from 18.8% in 1993. As additional cases are adjudicated and reported by the courts, this figure will decrease slightly (see Table 8).
- ▶ The average reported BAC level for all convicted DUI offenders in 2003, using APS reporting forms as the data source, was 0.161%, which is down slightly from the

last several years, yet still more than double the illegal per se BAC limit of 0.08% (see Table 9a).

- ▶ Average BAC levels increase as a function of the number of prior DUI convictions, from a 0.157% BAC for a first offense to a 0.188% BAC for a fourth or subsequent offense (see Table 10).
- ▶ Among 2003 convicted DUI offenders, 77.1% were first offenders, 17.9% were second offenders, 4.0% were third offenders, and 1.0% were on their fourth or more offense. (The statutorily defined time period for counting priors in California has traditionally been seven years, although that period was just statutorily changed to 10 years by SB1694 – effective 1/1/05, Torlakson, 2004.) The proportion of repeat offenders (22.9%), shown in Table 10, among all convicted DUI offenders, has decreased slightly each year since 1989 (at which time 37% of all convictions were repeat offenses)..
- ▶ The average (mean) adjudication time lags were 3.3 months from DUI arrest to conviction and 3.0 months from conviction to update on the DMV database, totalling over 6 months from arrest to update on the offender's driving record. This total elapsed time from arrest to update is slightly shorter than in the last two years (see Table 7).

#### Variation by County:

- ▶ Among the larger counties, 2003 DUI conviction rates varied from highs of 89.2% in Orange to a low of 54.6% in San Francisco. Los Angeles County, which accounted for almost a quarter of all DUI arrests in the state, had a DUI conviction rate of 72.7% (see Table 7).
- ▶ Among the smaller counties, 2003 DUI conviction rates varied from a high of 97.2% in Amador to a low of 38.2% in Tehama (see Table 7).
- ▶ The rates at which DUI arrests were plea-bargained to alcohol-related reckless driving convictions varied from 25.3% in Del Norte County to 0% in Marin and Ventura counties (see Table 8).

- ▶ The percentage of DUI arrests that were improperly adjudicated as nonalcohol-related reckless driving convictions varied from 0% (Marin) to 11.8% (San Francisco). This is shown in Table 8.
- ▶ The percentage of DUI arrests adjudicated as minor convictions ("other" convictions) varied from 0% to 5.2%. Del Norte, San Luis Obispo, Modoc, Los Angeles, San Bernardino and Sierra counties had rates of 3% or more (see Table 8).
- ▶ In 6 counties, the proportion of arrestees not showing a conviction of any offense exceeded 30%. These counties were Tehama, Imperial, Trinity, Yuba, Mariposa, and Sierra. Twenty eight counties had nonconviction rates of less than 10%, with four counties at 0% (see Table 8).

#### Variation by Court:

- ▶ Court time lags from arrest to conviction (for courts with more than 200 reported convictions) varied from a high of 7.3 months in the Clovis court (Fresno County) to a low of 1.5 months for the Shafter and Mojave (Kern County) court (see Table B3).
- ▶ Statewide, the proportion of DUI arrests resulting in reckless driving convictions (alcohol and nonalcohol), was 10.2% in 2003. Several counties adjudicated more than 20% of their DUI arrests as reckless driving convictions, including Alpine, Del Norte, Inyo and San Francisco (see Table 8).
- ▶ Statewide, 17.7% of all DUI-related reckless driving convictions in 2003 are inappropriately designated as nonalcohol (see Table 8), compared to 18.2% in 2002, 18.0% in 2001, 17.8% in 2000, 21.1% in 1999 and 19.6% in 1998.

#### Demographic Characteristics:

- ▶ The average age of a convicted DUI offender in 2003 was 33.6 years (see Table 4).
- ▶ 47.8% of 2003 DUI convictees were aged 30 years or younger and 73.2% were 40 years or younger (see Table 4).
- ▶ Females comprised 16.5% of convicted DUI offenders arrested in 2003. The proportion of females among convicted DUI offenders has risen slightly each year since 1994 (see Table 4).

- The racial/ethnic distribution of 2003 DUI convictions (White = 44.1%; Hispanic = 42.9%; Black = 6.7%; “Other” = 6.3%) generally paralleled that of 2003 arrests, although Whites were somewhat more likely than other racial/ethnic groups to be convicted of the offense (as shown in Figure 5 and Table 5 below).

Figure 5. Relative likelihood of conviction by race/ethnicity. (Adjusted conviction rate by ethnicity ÷ overall conviction rate.)

<sup>1</sup>Conviction data by court are found in Appendix Table B3.<sup>2</sup>This count includes misdemeanors which carried a felony disposition code. These counts do not include 4th offenses (in seven years) which are statutorily defined as felonies.<sup>3</sup>These dismissals were identified in DMV's DUI Audit and Tracking System Summary Report.<sup>4</sup>The calculation of the conviction rate was based on total arrests including federal DUI arrests of Yosemite National Park not reported in the DOJ MACR system.<sup>5</sup>The calculation of the conviction rate was based on adjustments made for Santa Barbara County for incomplete arrest data in the DOJ MACR system.<sup>6</sup>This count includes both dismissed and reduced convictions. Sonoma's program for counting dismissals is currently being revised to reflect only dismissed cases.

<sup>1</sup>The percentages total to 100 by row (county).

<sup>2</sup>These include failure-to-appear (FTA) notices; the statewide average is 4.4%.

<sup>3</sup>The calculation of the conviction rates was based on total arrests including federal DUI arrests (Yosemite National Park) not reported in the DOJ MACR system.

<sup>4</sup>The calculation of the DUI conviction rate was based on adjustments made for Santa Barbara county for incomplete arrest data in the DOJ MACR system.

\*These counties had more total convictions than arrests, which could be due to arrests occurring in a different county from the county of conviction, or due to underreported arrests by arresting agencies, or underreported arrests by federal agencies (reporting not required by the DOJ MACR system).

\*The source of BAC data is the APS reporting form for convicted DUI offenders, rather than the abstract of conviction for those offenders, which was the data source in the earliest reports. This change in data source was made because of the more complete BAC reporting on APS forms (79.7% of total) versus court abstracts (with only 54.3% showing BAC levels). This chart does not show 1504 zero BAC levels, which may include driving-under-the-influence of drug convictions..

3RD DUI	4.0	.180	.176
4TH+ DUI	1.0	.188	.182

### SECTION 3: POSTCONVICTION SANCTIONS

Data on court sanctions assigned to convicted DUI offenders were taken from DUI abstracts of conviction for offenders arrested in 2003. Although counts of postconviction court license actions are included, total counts of all license actions, including DMV administrative per se (APS) license suspensions and revocations, are shown in the Administrative Actions Section. APS actions (effective July 1990) are initiated by law enforcement immediately upon arrest for DUI, and are administered independently of the criminal adjudication process. In previous reports, sanction combinations for first and second offenders were reported by county; however, they are no longer presented because recent legislation has eliminated variation in sanctions statewide. This section includes the following tables:

Table 11: 2003 DUI Court Sanctions by DUI Offender Status. This table shows the frequency of specific court sanctions statewide by number of prior DUI convictions. The specific court sanctions tallied include percentages of probation, jail, alcohol treatment programs (first offender, SB 38 second offender, and 30-month third offender programs), license restriction, court suspension, and ignition interlock. Crosstabulations of sanctions by county, court, and number of prior convictions appear in Appendix Table B4.

Table 12: 2003 DUI Court Sanctions by County and Offender Status. This table displays the distribution of court sanctions by county for all DUI offenders.

From the data in these and the tables in the Appendix, it is evident that the use of alternative sanctions continued to vary widely by county, court, and offender status in 2003. For example:

#### Statewide Parameters:

- ▶ The most frequently applied court sanction among all convicted DUI offenders was probation (96.3%), while the least frequently used court sanction was ignition interlock (3.8%). DUI offenders were sentenced to jail in 73.0% of the cases. (However, in many jurisdictions, jail is often served as community service rather than actual jail time.)

Figure 6 (below) graphically displays the statewide data from Table 11 showing the percentage representation of specific types of court-ordered sanctions among all convicted DUI offenders. Because virtually all offenders receive more than one type of sanction, the cumulative percentage adds to much more than 100%.

*Figure 6.* Percentage representation of court-ordered DUI sanctions (2003).

#### County Variation:

- ▶ The proportion of first-DUI offenders arrested in 2003 who received a court postconviction suspension varied by county, from 41.6% in Monterey County, to 0% in Alpine, Sierra, and Yuba Counties (see Table 12).
- ▶ The use of first DUI offender alcohol programs varies by county from over 90% in 11 counties to 21.9% in Placer County (see Table 12).

#### Court Variation:

- ▶ Statewide, courts vary significantly in how they use available sanctions for DUI offenders. In Los Angeles County alone, one court (Lancaster) assigned jail to 97.4% of all convicted DUI offenders ( $n = 764$ ), while another court (Malibu) in the same county assigned jail to only 26.6% of all convicted DUI offenders ( $n = 293$ ). This is shown in Table B4.
- ▶ In 2003, Los Angeles and San Joaquin were the only counties with active 30-month third offender treatment programs. Even within these counties, however, assignment of third offenders to 30-month programs was low, and varied significantly by court (see Table B4).
- ▶ Statewide, courts required only 3.8% of all convicted DUI offenders to install an ignition interlock device in 2003. This is down from 6.3% in 1997 and 1998, primarily because legislation in 1999 shifted the mandatory interlock requirement from all repeat DUI offenders to all suspended or revoked DUI offenders caught driving while disqualified, and data on the new “mandatory” interlock assignments are not captured by the DUI-MIS report.

Variation by Offender Status:

- ▶ About two-thirds of first-DUI offenders arrested in 2003 were sentenced to jail, compared to over 90% of all repeat offenders (see Table 11).
- ▶ 87.2% of first DUI-offenders were assigned to alcohol treatment programs, along with 84.3% of second offenders, 59.6% of third offenders, and 31.8% of fourth-or-more DUI offenders. (By statute, however, all offenders must eventually complete specified alcohol treatment programs in order to be eligible for license reinstatement). This is shown in Table 11.
- ▶ 5.9% of first-DUI offenders and 10.4% of repeat-DUI offenders received court license suspensions in 2003 (see Table 11). Under the APS law (since July 1990), all DUI offenders with BAC levels of 0.08% or more are also subject to a 30-day to 1-year administrative license suspension, or two to three years revocation.
- ▶ 12.9% of repeat-DUI offenders were assigned ignition interlock in 2003, compared to 10.9% in 2002, 8.1% in 2001, 7.5% in 2000, 13.3% in 1999 and 22.3% in 1998. In spite of the old mandatory interlock law for all repeat offenders (AB 2851 - Freidman), which took effect on July 1, 1993, judges routinely did not assign interlock to these offenders (over 75% of “mandatory” assignments were not made). This law was repealed in 1998, and a new ignition interlock law (AB 762 - Torlakson) and program was enacted and implemented July 1, 1999, that established mandatory interlock for DUI suspension/revocation violators, while providing incentives for repeat offenders to reinstate early with interlock. Judicial assignments to the new mandatory provisions have steadily risen since the law was implemented, and proportionally more DUI suspension violators are now assigned to interlock than were repeat offenders under the old “mandatory” law.

TABLE 11: 2003 DUI COURT SANCTIONS BY DUI OFFENDER STATUS\*

DUI OFFENDER STATUS	TOTAL	PROBATION	JAIL	1ST OFFENDER ALCOHOL PROGRAM	SB 38 ALCOHOL PROGRAM	30-MONTH PROGRAM	LICENSE RESTRICTION	COURT SUSPENSION	IGNITION INTERLOCK

## SECTION 4: POSTCONVICTION SANCTION EFFECTIVENESS

This section presents reoffense and crash rates, and the methodology and results of the effectiveness of alcohol education programs applied to drivers convicted of an alcohol-related offense.

The first part of the section examines descriptive indicators, such as recidivism and crash rates, for different groups of DUI offenders within different periods of time: 1) one-year DUI recidivism and crash rates for first and second DUI offenders from 1990-2003, 2) one-year DUI recidivism and crash rates by county, for 2003 first and second DUI offenders, 3) proportions of alcohol education program completions for 2003 first and second DUI offenders, and 4) long term recidivism rates of the 1994 DUI offenders.

The second part of the section contains the results of several sanction analyses evaluating the effectiveness of alcohol education programs for two groups of DUI offenders: 1) drivers convicted of alcohol-related reckless driving, and 2) first DUI offenders, who attended 3-month and 6-month alcohol education programs.

Also in the second part of the section and new this year were two additional subanalyses: 1) an evaluation of 6-month alcohol education programs for first DUI offenders with BAC levels below .20 versus first DUI offenders with BACs of .20 or above, and 2) an evaluation of the relative effectiveness of 3-month versus 6-month alcohol education programs for first DUI offenders with BAC levels of .20 and above.

The following are highlights of the findings:

- ▶ The 1-year recidivism rates for all first offenders in 2003 continued to remain at the lower level of the past five years. Comparing these rates to the much higher rate of 1990, DUI reoffenses in 2003 were 38.2% lower than for 1990 for all first offenders (see Figure 7 and Table 13a).
- ▶ The 1-year reoffense rates for second offenders is slightly higher than last year, but overall the rates have leveled out in the past seven years; recidivism decreased from 1990 to 2003 by 33.0% for all second offenders (see Figure 7 and Table 13a).

- ▶ Overall, subsequent 1-year crash rates have declined from 1990 to 2003 by 20.0% for second offenders; although their rate was the lowest in 1996, crashes have gradually increased in recent years for all second offenders. The crash rate for first offenders steadily increased from 1993 to 2001, and has decreased since then. The 2003 rate is now 9.4% lower than the 1990 crash rate (see Figure 8 and Table 13a).
- ▶ Of those arrested in 2003 who were referred to alcohol education or treatment programs, 61.1% of first offenders and 25.1% of second offenders completed their program assignment (see Table 14).
- ▶ At the end of 10 years, 26% of DUI offenders originally convicted in 1994 had at least one subsequent DUI conviction, and 30% incurred at least one DUI incident (see Figure 9a).
- ▶ Over 10 years, recidivism rates increased as the number of prior offenses increased. The proportion of third offenders reoffending was 36%, while 30% of second offenders and 24% of first offenders recidivated (see Figure 9b).
- ▶ Males showed a much higher cumulative proportion (27%) of reoffenses than did females (19%) over the 10-year time period (see Figure 9c).
- ▶ Long-term recidivism rates are inversely related to age, with higher reoffense rates associated with the youngest age group, and lowest rates with the oldest group (see Figure 9d).
- ▶ After 5 years, the proportion reoffending among the 1994 group was much lower (18%) compared to the proportion reoffending in 1984 (27%) and in 1980 (35%). (See Figure 9e).
- ▶ Similar to last year's evaluation, this year's results show that the subsequent 1-year crash rates of alcohol-related reckless offenders assigned to an alcohol education program were not significantly different than those of the nonparticipants. However, the subsequent DUI incident rates of the program participants were significantly lower than those of the nonparticipants (see Table 16a).
- ▶ Like the last three years' evaluations, the 1-year crash rates of first offenders attending the 3-month program did not vary significantly from those attending

6-month programs. However, the subsequent DUI incident rate of the short-term program participants was again significantly lower than that of the long-term participants (see Table 16b).

- ▶ Among first DUI offenders assigned to 6-month alcohol treatment programs, crash rates of DUI offenders with BAC levels .20 and above did not vary significantly from crash rates of those with BAC levels below .20. However, DUI offenders with BAC levels .20 and above had more DUI incidents than those with BAC levels below .20 (see Table 16c).
  
- ▶ The length of time of alcohol treatment program (3-month vs. 6-month) had no effect on crash rates and DUI incidents for first DUI offenders with BAC levels .20 and above (see Table 16d).

*Subject Selection and Data Collection.* Convicted DUI and alcohol-related reckless offenders were identified from monthly abstract update tapes which contain all DUI conviction data reported to DMV by the courts. Except for the 1994 cases, subjects were selected based on the number of prior DUI and alcohol-related reckless driving convictions within the seven years prior to their entry DUI arrest in 2003. For this year's report, subjects selected were: 1) first-DUI offenders—drivers who had no DUI or alcohol-related reckless driving convictions within the previous seven years, 2) second-DUI offenders—drivers who had one DUI or alcohol-related reckless driving conviction within the previous seven years, 3) alcohol-related reckless offenders with no previous DUI offenses in the past seven years, and 4) first-DUI offenders referred to 3-month and 6-month alcohol education programs. In addition, all DUI offenders arrested in 1994 were selected for the 10-year follow-up evaluation.

The crash and recidivism rates of first and second DUI offenders over time, and the effectiveness of alcohol education programs for persons convicted of alcohol-reckless as a DUI offense and first offenders, are evaluated in terms of postconviction driving record as measured by: 1) total crashes and 2) DUI incidents, which include alcohol-involved crashes, DUI convictions, Administrative Per Se suspensions (APS for 0.08% BAC or chemical test refusal), and DUI failure-to-appear notices (FTA). For the 1994 DUI offenders, recidivism is measured by subsequent DUI convictions, along with one comparison of DUI incidents.

Previous DUI-MIS reports included evaluations of sanction effectiveness for second offenders but these analyses were not conducted for the past several years and will no longer be conducted because AB 762 (Torlakson, 7/1/99) not only altered the ignition interlock requirements for second offenders, but also added the application of ignition interlock to offenders who were convicted of driving with a suspended or revoked license. These changes to the DUI laws would complicate evaluations of the effectiveness of second offender sanctions, and make the results non-comparable to those of previous DUI-MIS studies. In addition, the law required a new evaluation of the effectiveness of ignition interlock devices that was recently completed by the California DMV, and this study provides a rigorous approach to assessing the impact of ignition interlock devices.

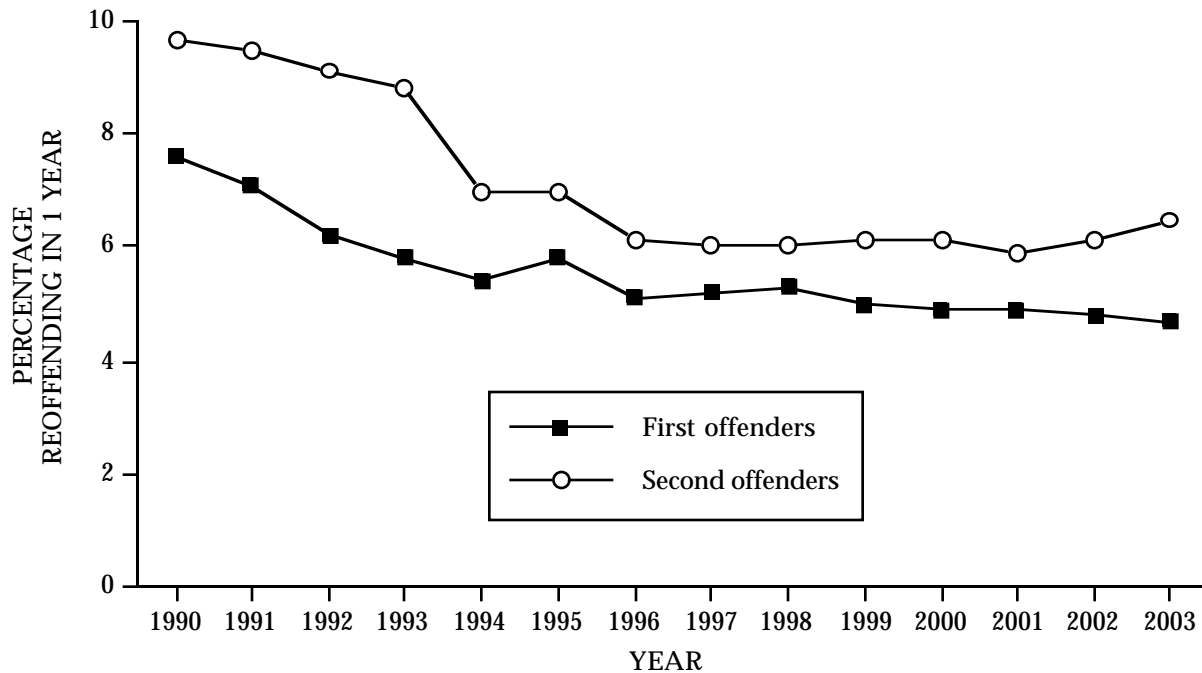

Although the sanction analyses were not conducted for first and second-DUI offenders as in previous years, the 1-year unadjusted crash and DUI reoffense data from all of the previous and current evaluations were included. In order to maintain comparability to the previous subject selection criteria, certain types of offenders had to be excluded. These previous and current analyses excluded offenders with felony convictions and chemical test refusal suspensions because their license control penalties were different from the misdemeanor offender groups. Drivers who did not have a full 1-year subsequent time period (because of late conviction dates) were also excluded, as well as drivers with "X" license numbers (meaning that no California license number could be found) and drivers with out-of-state ZIP Codes. Altogether, the excluded cases represented about 20.0% of the original convicted offender file. The only exclusions made for the 1994 offenders were the out-of-state cases and drivers with "X" license numbers.

## DUI RECIDIVISM AND CRASH RATES

### One-Year DUI Recidivism and Crash Rates for First and Second DUI Offenders from 1990-2003

The 1-year subsequent DUI-incident reoffense rates for both first- and second-offender sanction groups were compiled from the 14 previous and current annual DUI-MIS evaluations and configured onto two separate graphs to display these rates over time.

Figure 7 shows the proportions of first- and second-offender sanction groups, respectively, arrested between 1990 and 2003 who reoffended within one year after conviction.

*Figure 7.* Percentages of first- and second-DUI offenders reoffending in a DUI incident within one year after conviction (arrested in 1990-2003).

This figure and Table 13a show an ongoing gradual decline in the 1-year recidivism rates for first-offenders overall from 1990 to 2003; although there are slight upward trends in 1995 and 1998, these trends are followed by a leveling out of the rates over the past 5 years. The overall decline translates into a 38.2% reduction in recidivism for all first offenders compared to the rates of 1990. The decline in DUI reoffenses is steeper in the early years (1990-1994), following the enactment of APS suspensions for all DUI arrestees. As is evident in Figure 7, the reoffense rates of first offenders continue to be lower than those of the second offenders; this has been consistently evident throughout all previous analyses conducted on first and second offenders.

TABLE 13a: ONE-YEAR UNADJUSTED PERCENTAGES OF  
SUBSEQUENT DUI-INCIDENT-INVOLVED AND CRASH-INVOLVED  
FIRST AND SECOND OFFENDERS, 1990-2003

YEAR	DUI-INCIDENT-INVOLVED		CRASH-INVOLVED	
	FIRST-DUI OFFENDERS	SECOND-DUI OFFENDERS	FIRST-DUI OFFENDERS	SECOND-DUI OFFENDERS
1990	7.6	9.7	5.3	4.0
1991	7.1	9.5	4.7	3.6
1992	6.2	9.1	4.1	3.5
1993	5.8	8.8	4.1	3.5
1994	5.4	7.0	4.5	3.1
1995	5.8	7.0	4.6	3.0
1996	5.1	6.1	4.5	2.4
1997	5.2	6.0	4.7	2.7
1998	5.3	6.0	4.8	2.6
1999	5.0	6.1	5.0	2.8
2000	4.9	6.1	5.1	3.1
2001	4.9	5.9	5.2	3.0
2002	4.8	6.1	5.1	3.3
2003	4.7	6.5	4.8	3.2
% DIFFERENCE 1990-2003	-38.2%	-33.0%	-9.4%	-20.0%

As noted last year, a similar overall decline is evident in the 1-year reoffense rates for the second offender group as displayed in Figure 7 and Table 13a, but the rate of decline is greatest during the years from 1993 to 1996; then the rates level out for several years, followed by a slight decline in 2001 and then show a modest increase from 2001 to 2003. Table 13a shows that, from 1990 to 2003, the reoffense rates decreased 33.0% for the second offender group as a whole. The overall reoffense rates of second offenders remain relatively higher than those of first offenders. Previous DUI-MIS reports suggested that, while many factors may be associated with the overall decline in DUI incidents for both first and second offenders, the reduction may largely be attributable to the implementation of APS suspensions in 1990. An evaluation (Rogers, 1997) of the California APS Law, in fact, documents recidivism reductions of up to 21.1% for first offenders and 19.5% for repeat offenders which are attributable to the law.

The 1-year subsequent crash rates for both first and second offenders were also compiled from previous and current DUI-MIS evaluations and graphically displayed

over time. Figure 8 shows the proportions of 1990-2003 first and second offenders who had crashes within one year after their conviction.

*Figure 8.* Percentages of first- and second-DUI offenders involved in a crash within one year after conviction (arrested in 1990-2003).

Among first offenders from 1990 through 2003, Figure 8 and Table 13a show an initial decline in crash rates for the earliest years, followed by a gradual increase after 1993, and slight decline after 2002. The relative difference between first offender crash rates between 1990 and 2003 is - 9.4%, whereas the relative difference for second offenders for those same years shows a much greater decline in crashes of -20.0%.

Figure 8 indicates a declining trend in the overall crash rate of second offenders up to 1996. Following the downward trend in crashes from 1990 through 1996, the crash rates gradually increase and continue on a slow upward trend, dropping slightly in 2001, increasing again in 2002, and decreasing slightly in 2003. Overall, second offenders have lower crash rates than do first offenders (Table 13a), and this fact has been well documented in past evaluations; it has been speculated that the lower crash rate of second offenders may be related to the longer-term (one to two years) license (restriction/suspension) actions imposed on second offenders.

---

### One-Year DUI Recidivism and Crash Rates by County for 2003 First and Second DUI Offenders

New to this year's report are the 1-year subsequent DUI recidivism and crash rates, by county, for both first and second DUI offenders arrested in 2003.

Table 13b displays 1-year subsequent DUI recidivism rates described above. As shown in this table, among the larger counties, the rate at which first offenders had a subsequent DUI incident within one year varied from 7.3 in San Joaquin County to 3.7 in Orange County. Among the smaller counties, Alpine, Calaveras and Del Norte had a DUI recidivism rate above 11.0, while Siskiyou and Lassen had a DUI recidivism rate below 2.0. Second offenders had generally higher DUI recidivism rates than first offenders. Among the larger counties, San Joaquin County again had the highest rate, with 10.3% of second offenders having a subsequent DUI incident within one year whereas Orange County's second offenders had the lowest rate of 4.0 for subsequent DUI incidents. Among the smaller counties, the DUI recidivism rate for second offenders ranged from 16.0 (Colusa) to 0.0 (Modoc and Plumas).

One-year subsequent crash rates, by county, for both first and second offenders arrested in 2003 are displayed in Table 13c. Among the larger counties, the rate at which first offenders had a subsequent crash within one year varied from 5.6 in Sacramento County to 3.8 in Santa Clara County. Among the smaller counties, Alpine, Colusa and Del Norte had crash rates above 7.0, while Modoc and Sierra had a 0.0 crash rate. Second offenders have generally lower crash rates than first offenders. Among the larger counties, the rate at which second offenders have a subsequent crash within one year varied from 5.5 (Contra Costa) to 1.8 (San Mateo). Among the smaller counties, two counties had a crash rate above 8.0 (Amador and Nevada), and nine counties had 0.0 crash rate (Alpine, Del Norte, Glenn, Lassen, Mariposa, Modoc, Mono, Sierra, and Siskiyou).

### The Proportions of Alcohol Education Program Completions for 2003 First and Second DUI Offenders

Like last year, an effort was made to capture the number and proportions of convicted first and second offenders (arrested in 2003) whose records indicated that they had completed the alcohol education or treatment programs. This effort was made possible by the recent addition of a subrecord to each person's driving record that contains data on program enrollment and completion dates, court information relevant to the DUI conviction, and program length of time. Previous efforts were limited by the lack of organized fields of data even though part of this information was available.

The proportions of referrals to the various DUI sanctions by the number of prior DUIs appear in Table 14. It can be seen from this table that 87.2% of first offenders and 84.3% of second offenders were referred to an alcohol treatment program. Table 14 shows the counts and proportions of convicted first and second offenders, arrested in 2003, who completed the requirements for attending an alcohol education or treatment program; 57,351 first offenders and 5,541 second offenders completed their alcohol program assignment. This translates into 61.1% of referred first offenders and 25.1% of referred second offenders completing the program requirement. The underreporting of program completions for second offenders is probably related to the insufficient follow-up time thus far allowed for the 18-month completions. Among the offenders who completed the program, 97.0% of first offenders had attended alcohol programs that range from 3 to 6 months, while 94% of second offenders attended the 18-month alcohol program. Note that to obtain a license restriction, there must be evidence that DUI offenders have enrolled in an alcohol program, and that in order to remove the restriction from their driver license, they must have completed the program.

TABLE 14: COUNTS AND PROPORTIONS OF REPORTED ALCOHOL PROGRAM COMPLETIONS FOR CONVICTED FIRST AND SECOND OFFENDERS ARRESTED IN 2003

DUI OFFENDERS	TOTAL <i>N</i>	PROGRAM REFERRALS		PROGRAM COMPLETION	
		<i>N</i>	%	<i>N</i>	%
1 <sup>ST</sup> offenders (3 months to 6 months)	107,608	93,834	87.2%	57,351	61.1%
2nd offenders (18 months)	26,224	22,107	84.3%	5,541	25.1%

### Long Term Recidivism Rates of the 1994 DUI Offenders

Since all DUI offenders were included in the 1994 group, it was possible to observe and compare the long-term recidivism rates for subdivided groups within the 1994 cohort, and to see how these groups differ in their long-term recidivism rates. This approach was also taken in a previous study conducted by Peck (1991), in which the reoffense failure curves of various groups among 1980 and 1984 DUI offenders were evaluated. Failure curves are cumulative percentages over time that display the first reoffense that occurs after the initial DUI conviction. Both DUI convictions (alone) and DUI incidents over the 10-year follow-up period for the 1994 group were included as outcome data in order to maintain comparability with the 1984 and 1980 cohorts from a previous evaluation (Peck, 1991).

Table 15 shows cumulative percentages of the first DUI reoffenses for the 1994 offenders, as well as 9- and 10-year cumulative percentages for the 1980 and 1994 groups and 5-year cumulative percentages for the 1984 group (dates were not available beyond 5 years).

TABLE 15: CUMULATIVE PERCENTAGES OF THE FIRST SUBSEQUENT  
DUI REOFFENSES FOR THE 1994 DUI OFFENDERS

YEAR	PERCENTAGE											
	1 <sup>ST</sup> DUI	2 <sup>ND</sup> DUI	3 <sup>RD</sup> DUI	MALES	FEMALES	16-25	26-45	46-65	65+	1980	1984	1994

4 <sup>TH</sup>	14	18	21	16	11	18	16	13	9	30	24	16
5 <sup>TH</sup>	17	21	25	19	13	20	18	15	10	35	27	18
6 <sup>TH</sup>	19	23	28	22	14	23	21	17	10	38	NA	21
7 <sup>TH</sup>	20	25	31	23	16	25	23	18	11	40	NA	22
8 <sup>TH</sup>	22	27	33	25	17	26	24	19	11	42	NA	24
9 <sup>TH</sup>	23	28	35	26	18	28	25	20	12	44	NA	25
10 <sup>th</sup>	24	30	36	27	19	29	27	21	12	NA	NA	26

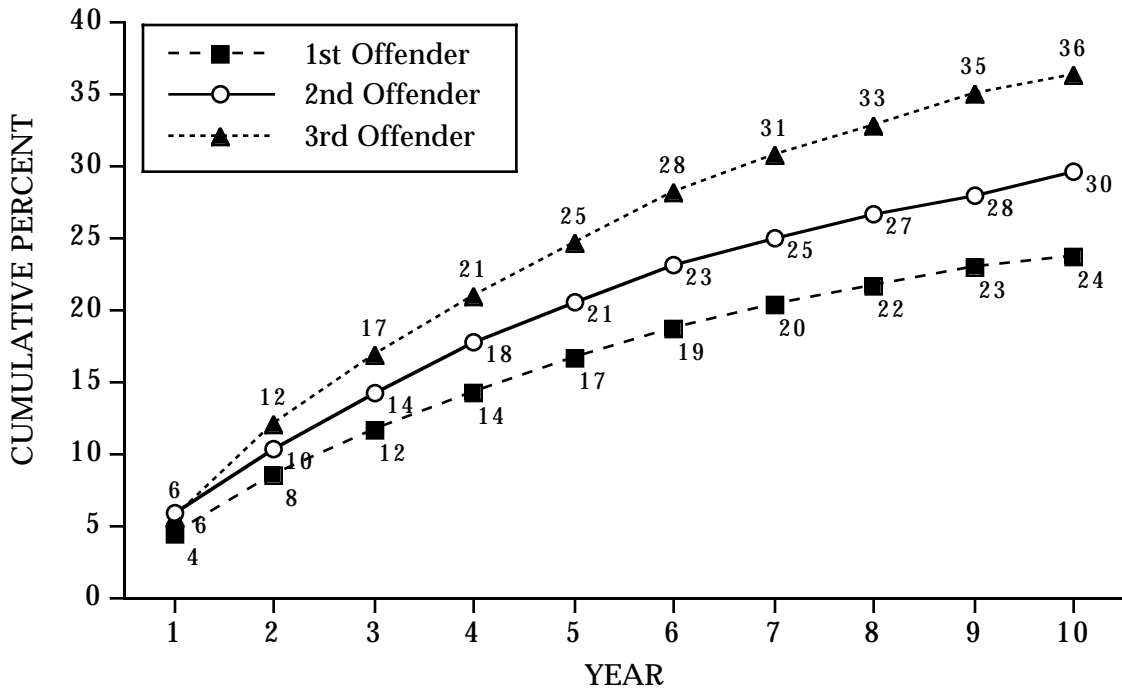

In addition to Table 15, figures 9a through 9e, display recidivism rates for 1994 offenders over 10 years.

*Figure 9a.* Length of time between 1994 DUI conviction, and first subsequent DUI conviction and DUI incidents (alcohol crashes, major convictions, APS suspensions and DUI FTAs).

In looking at the 1994 offenders as a whole, it is evident from Figure 9a that at the end of 10 years, 26% accumulated at least one DUI reoffense. Considering a more expanded view of DUI reoffenses to include all DUI incidents, the recidivism rate increased to 30%. These failure curves are steepest in the earliest years following the initial conviction, and then start to flatten out in the 7<sup>th</sup> through 10<sup>th</sup> years. For both measures, the steepest climb occurs in the first year following conviction. It is probable that those with more serious alcohol problems would be likely to recidivate earlier than those with lesser drinking problems.

One way to explore the extent of drinking severity is to examine the recidivism rates by the number of prior DUIs within seven years of the entry DUI violation. Figure 9b displays the cumulative proportions of reoffenses by first, second, and third or more DUI offenders.

*Figure 9b.* Length of time between 1994 DUI conviction and first subsequent DUI conviction by number of prior DUI convictions.

It is evident from this graph and from Table 15 that the recidivism failure curves increase as the number of prior offenses becomes greater. Third-or-more offenders have the highest overall failure curve, and continue to maintain the higher proportions over the ten year period of time. At the end of 10 years, 36% of third offenders have reoffended compared to 30% of second offenders and 24% of first offenders.

Since the majority of DUI offenders has always been male (87% in 1994), it is relevant to inspect the recidivism rates of the 1994 offenders by gender. As evident in Figure 9c and Table 15, males show much higher cumulative proportions reoffending than females. At the end of 10 years, 27% of males have reoffended as compared to 19% of females. The failure curve of females is noticeably flatter throughout the 10 years as compared to the curve of males. In the final 3 years, the proportion of both males and females recidivating is only one percent per year.

*Figure 9c.* Length of time between 1994 DUI conviction and first subsequent DUI conviction by sex.

Since it is also well known that DUI violations are associated with certain age groups, the recidivism curves are assessed also by age. Figure 9d displays the failure curves of four age groups. It is evident that reoffense rates are inversely related to age; the failure rates are highest for the youngest group and lowest for the oldest group. Over ten years, the failure curves of the two youngest groups are quite close to each other and are much steeper than the curve of the oldest group; their failure curves are steepest during the first two years following the entry conviction. The failure curve of the 65+ group flattens out at the 5<sup>th</sup> year, much sooner than the curves of the other groups. The mortality factor of the oldest group could influence the lower recidivism rate; also, this group may be imposing self-restricted driving by driving less frequently than the other age groups. After 10 years, the youngest two groups reoffended by 29% and 27%, respectively, while 21% of the middle age group and 12% of the oldest group recidivated.

Figure 9d. Length of time between 1994 DUI conviction and first subsequent DUI conviction by age group (age at conviction date).

The final figure, Figure 9e, compares the 1994 recidivism curves with those of the 1980 and 1984 cohorts over a 5-year time period.

Figure 9e. Length of time between DUI conviction and first subsequent DUI reoffense of 1980, 1984, and 1994 DUI drivers.

Cumulative percentages for the 1980, 1984 and 1994 groups, presented in Figure 9e and Table 15, allow long-term historical comparison with consideration of probable influence of the major DUI laws in California over a 15-year time period.

Figure 9e reveals that at the end of five years, 35% of the 1980 offenders reoffended compared to 27% of the 1984 group and 18% of the 1994 offenders. Quite dramatically, the proportion recidivating in the 1994 group (18%) dropped by half compared to those in the 1980 group (35%). Major pieces of DUI legislation were enacted in California over this time span of 15 years. The noticeably lower reoffense proportions of the 1984 group (27%) compared to the 1980 group (35%) can likely be attributed to the 1982 laws, AB 541 (Moorhead), which applied tougher sanctions on DUI offenders, and AB 7 (Hart) which established the 0.10% per se BAC illegal limit. The effectiveness of these laws was confirmed by a previous California study by Tashima and Peck (1986). Lastly, comparing the 1980 cohort with the 1994 group over nine years in Table 15 shows that 44% of the 1980 group recidivated while 25% of the 1994 group reoffended. The difference between the recidivism rates of these two groups remains quite dramatic at the end of nine years. There was only a one percent increase in recidivism for the 1994 group in the last year of the 10 years.

Continuing with Figure 9e, it is evident that the difference in the reoffending proportions between the 1984 group (27%) and the 1994 group (18%) is somewhat dramatic; this reduction in reoffenses is possibly attributable to the enactment of the 1990 laws, SB 1623 (Lockyer), which established APS suspensions for all offenders at the time of arrest, and SB 1150 (Lockyer), which set the illegal BAC limit to 0.08% and imposed other stringent sanctions on DUI offenders. As noted earlier, an evaluation (Rogers, 1997) of the California APS law documented recidivism reductions of up to 21.1% for first offenders and 19.5% for repeat offenders, both attributable to the APS law.

In summary, the 1994 offenders have long-term reoffense rates that are higher among those with more DUI priors (within seven years), among males, and among younger-aged drivers. These are not surprising findings, and are consistent with and supported by previous studies. In comparing the reoffense rates between the 1994 group and the 1980 and 1984 offenders, it was found that the cumulative proportions of reoffenses was much lower among the 1994 offenders. The dramatically lower reoffense rates of the 1994 group could be attributed to the enactment of more stringent sanctions for DUI offenders, such as the APS suspension law of 1990.

---

## ALCOHOL EDUCATION PROGRAM EVALUATION FOR THE ALCOHOL-RELATED RECKLESS OFFENDERS AND FIRST DUI OFFENDERS

*Subject Selection and Follow-up Data:* The basis for evaluating the effectiveness of alcohol education programs for these two groups was established by legislation. The evaluation for the offenders with alcohol-related reckless convictions was mandated by SB 1176 (Johnson); for these offenders, this legislation requires the courts to order enrollment in an alcohol/drug education program as a condition of probation. An evaluation of the efficacy of the 3-month versus 6-month alcohol education/counseling program for first offenders was mandated by AB 1916 (Torlakson). In 2004, the courts were required to refer first offenders whose BAC level is less than .20% to a 3-month program, and those with a BAC level of .20% or above, or who refuse to take a chemical test, to a 6-month program.

Two groups of alcohol-related reckless convictees were identified, including: 1) those who were assigned to an alcohol education program, and 2) those who were not assigned to a program. These sanctions are reported by the courts to DMV via disposition codes on the conviction abstracts. Although courts are mandated to require all alcohol-related reckless drivers to attend an alcohol education program as a condition of probation, it was found that 39% of such offenders were not assigned. This discrepancy allowed a comparison of subsequent crashes and DUI incidents between the two groups.

In evaluating the traffic safety impact of length of time of first offender programs, only first offenders who showed the 3-month and 6-month designations on their conviction abstracts were identified and selected for this analysis. Unfortunately, the records of 66% of first offenders who were referred to the alcohol education programs did not display the specific length of time. These individuals were not included in this evaluation, and this analysis is limited to first offenders who were adjudicated by courts that were in compliance with the law. Of the total sample selected, 74% were referred to 3-month programs, while 26% were assigned to 6-month programs. Subjects for the initial analyses consisted of first offenders assigned to a 3-month alcohol program versus first offenders assigned to a 6-month program. To further explore the possible effects of BAC levels, two additional subanalyses included 1) first offenders assigned to

a 6-month alcohol program with BAC levels below .20 versus those with BAC levels of .20 and above, and 2) first offenders with BAC levels .20 and above assigned to a 3-month alcohol program versus first offenders with BAC levels .20 and above assigned to a 6-month alcohol program.

The conviction date for the prior/post analyses was considered to be the "treatment date" for defining prior and subsequent driving record data, because the penalties and sanctions for the offense are typically effective as of that date. The evaluation period for the postconviction driving measures starts from the conviction date, and was 1) 1-year following conviction for alcohol-related reckless offenders who were arrested from July, 2003 through June, 2004. 2) 1-year following conviction for first DUI convictees who were arrested in 2003, and who were referred to 3-month and 6-month alcohol education programs.

A buffer period of 4 months was allowed between the end of the evaluation period and the data extraction date to allow for processing and reporting of the most recent data to DMV. DUI offenders who had less than the full one-year follow-up time period (from conviction date to the buffer period) were excluded. For all of these groups, the outcome driver record measures consisted of the proportion of offenders who were involved in: 1) any crash, and 2) DUI incidents (alcohol-involved crashes, major convictions, APS/refusal suspensions, or DUI failures-to-appear). Only the first crash or DUI incident or "failure" was evaluated. This is not an important limitation with these data because the incidence of repeat failures (two or more crashes or DUI incidents) was very low over the study time window. More importantly, analysis of repeat failures would be subject to confounding by court sanctions received in connection with the first failure incident. This type of confounding is avoided because multiple incidents were not included in this analysis.

*Evaluation Design and Analytical Procedures:* Since it was not possible to randomly assign drivers to the various sanction groups, potential biases due to preexisting group differences were statistically controlled to the extent possible by using biographical data, prior driving record data, and ZIP Code indices, such as crash and traffic conviction averages for each driver's ZIP Code area (Table B5). While this "quasi-experimental" design is subject to a number of limitations in assessing cause-effect relationships, the attempt at statistical control of group differences removes at least part

of the bias in group assignment and provides a more precise estimate of the relationship between type of sanction and subsequent record. It is possible, of course, that the groups also differ on characteristics not measured by, or reflected in, the covariates. The possibility of uncontrolled biases becomes particularly problematic if sanctions are commonly received by offenders through self- or judicial-selectivity (e.g., drivers of higher socio-economic status may be more likely to receive program with restriction and less likely to receive jail than those of lower status).

For the alcohol-related reckless drivers and first offenders attending 3-month and 6-month programs, prior driver record data were extracted for the 2 years preceding their DUI or alcohol-reckless conviction date. The prior driver record variables for these offenders are shown in Appendix Table B5, and these driver record variables were used as covariates in the analyses.

Following the extraction of covariates, simple correlations were computed between demographic and prior driving variables and the outcome measures, number of days to first subsequent crash and number of days to first subsequent DUI incident. The demographic and 2-year prior driving variables that had statistically significant correlations with the outcome measures were identified and selected as potential variables. For each analysis logistic regression was used to test for potential interactions between the covariates and alcohol education program. In the analyses where there were significant interactions, the interaction term was included in the final logistic regression analyses.

There was one significant ( $p = .047$ ) interaction between the ZIP Code covariate injury averages and the alcohol program intervention in the analyses involving the alcohol-related reckless drivers, and between the ZIP Code covariate total crash averages and alcohol programs ( $p = .046$ ) in the subanalysis of those attending the 6-month program. Such an interaction indicates that there is a differential effect of the program intervention upon those with differing ZIP Code averages. Since these ZIP Code averages do not contain data elements specific to the individual but rather to a larger geographic area (ZIP Code) these interactions were not considered to be strongly conclusive and further investigation of these interactions was not explored.

## Alcohol Education Program Evaluation for Drivers Convicted of Alcohol-Reckless Driving

Figure 10a and Table 16a display the results of the fifth evaluation of the effectiveness of the alcohol education program on drivers convicted of alcohol-related reckless driving violations.

*Figure 10a.* Adjusted 1-year crash and DUI incident rates for 2003-2004 (fiscal year) alcohol reckless drivers by type of sanction.

***Total Crashes:*** Like last year's findings, the results show that assignment to the alcohol education program does not have a significant effect on the 1-year subsequent crash rates of alcohol-related reckless offenders. Comparing these rates to those of the 2003 first DUI offenders, it is evident that alcohol-related reckless drivers who are assigned and those not assigned to an alcohol program are more involved in crashes (5.44 and 5.82 per 100 drivers, respectively; see Table 16a) than are first DUI offenders (4.8 per 100 drivers; see Table 13a). It has been suggested in the past that the lack of postconviction license suspension/restriction prescribed by the court for the alcohol-related reckless drivers might explain the higher crash rates. Past studies have documented the effectiveness of license suspension on crash reduction. However, it is possible that alcohol-related reckless drivers who were arrested with a BAC level of .08 and above incurred an APS license suspension/restriction prior to their conviction.

TABLE 16a: THE EFFECT OF ALCOHOL EDUCATION PROGRAM ON  
SUBSEQUENT CRASHES AND DUI INCIDENTS FOR DRIVERS CONVICTED OF  
ALCOHOL-RELATED RECKLESS DRIVING

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF CRASH-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{GRP 1 - GRP 2}{GRP 2} \times 100$	NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{GRP 1 - GRP 2}{GRP 2} \times 100$
7/2003 - 6/2004	1) No program	(3,472)	5.44		3.88	
(follow-up period = 1 year)	2) Alcohol-education program	(5,424)	5.82	-6.5%	2.86	35.7%*

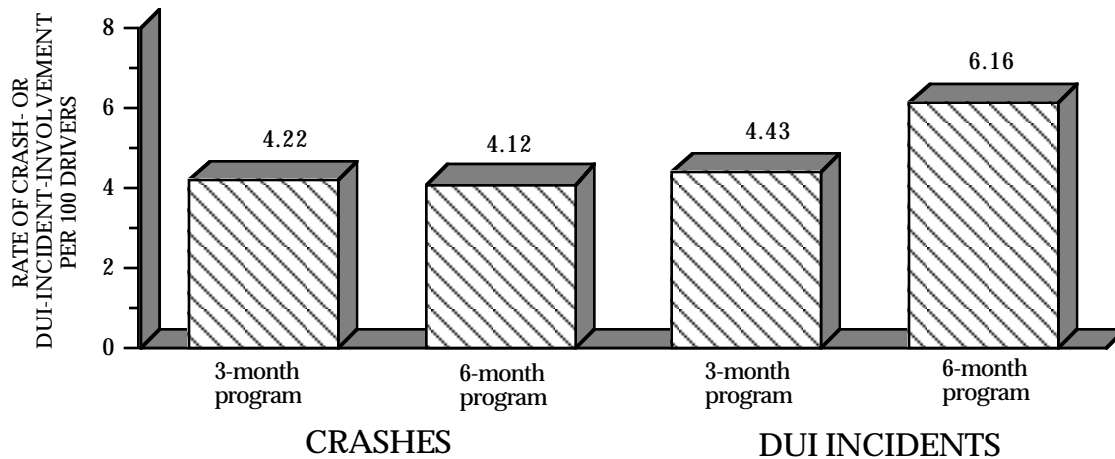

\* $p < .01$

*DUI Incidents:* Figure 10a and Table 16a indicate that program participants again show fewer DUI incidents in the one year following their assignment to the alcohol-education programs than the nonparticipants, and this difference is statistically significant. The reoffense rate of the program participants is 35.7% lower than that of alcohol-reckless offenders not assigned to the programs, and is very similar to the findings of last year's analyses. These results have to be viewed with some caution because random assignment to program attendance was not possible; there still remains the possibility of uncontrolled biases through self- or judicial-selectivity, even though statistical control of group differences removed part of the biases based on available covariates.

#### Results of the 3-Month and 6-Month Alcohol Education Program Evaluation for First DUI Offenders

*Total Crashes:* Figure 10b and Table 16b display the results of the fourth evaluation of the effectiveness of the alcohol education program on first DUI offenders assigned to 3-month versus 6-month programs. As was evident in the past three years, the results show that the length of time of the alcohol education program does not have a significant effect on the 1-year subsequent crash rates of first-time DUI offenders. The 6-month program participants have only a 2.4% lower crash rate than that of the 3-month participants. As noted earlier, the short-term APS license suspension/restriction for all first offenders might explain their lower crash rates, compared to the rates of the alcohol reckless drivers. Past studies have supported the effectiveness of license suspension on crash reduction.

*Figure 10b.* Adjusted 1-year crash and DUI incident rates for first offender drivers (arrested in year 2003) by length of alcohol education program.

TABLE 16b: FIRST OFFENDER 3-MONTH AND 6-MONTH ALCOHOL EDUCATION PROGRAM EFFECTS ON TOTAL CRASHES AND DUI INCIDENTS

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF CRASH-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$	NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$
2003  (follow-up period = 1 year)	1) 3-month program	(23,213)	4.22	2.4%	4.43	-28.1%*
	2) 6-month program	(8,098)	4.12		6.16	

\*  $p = .0001$

*DUI Incidents:* In contrast to the crash findings but similar to last year's results, Figure 10b and Table 16b indicate that, among first DUI offenders the 3-month program participants have significantly ( $p = .0001$ ) fewer DUI incidents in the one year following their assignment to the alcohol-education programs than do the 6-month program participants. This finding is consistent with the last 3 years' evaluations of subsequent DUI incidents. The reoffense rate of the 3-month program participants is 28.1% lower than that of the 6-month participants. Again, this finding is not surprising given that

those assigned to the longer-term program have higher BAC levels (.20% and above), and would be more likely to recidivate than those with lower BAC levels.

In order to determine whether BAC level was a major factor in the outcome of the previous analysis, two further subanalyses were conducted to investigate this possibility. Among first offenders assigned to the 6-month program, 34% actually had BAC levels below .20 and 66% had BAC levels .20 and above. This difference in BAC levels allowed for conducting additional analyses comparing the outcome measures between those with BAC levels below .20 and those with BAC levels .20 and above. A second subanalysis was conducted comparing 3-month versus 6-month alcohol treatment program effects for those with BAC levels of .20 and above. There were a sufficient number of drivers who had BAC levels of .20 and above who were assigned to the 3-month program to allow for this second comparison. The results of these additional subanalyses are described below.

#### Results of the 6-Month Alcohol Education Program Evaluation for First DUI Offenders with BAC Levels Below .20 Versus .20 and Above

*Total Crashes and DUI Incidents:* Table 16c shows the results of the effects of the 6-month alcohol treatment program on crashes and DUI incidents for two groups: 1) those with BAC levels below .20 and, 2) those with BAC levels of .20 and above. As evident in Table 16c, differences in crash rates between the two groups were not significant. Therefore, regardless of differences in BAC levels, the 6-month program did not have an impact on the two groups relative to subsequent 1-year crashes.

TABLE 16c: FIRST OFFENDER 6-MONTH ALCOHOL EDUCATION PROGRAM  
EFFECTS ON TOTAL CRASHES AND DUI INCIDENTS FOR DRIVERS  
WITH BAC LEVELS BELOW .20 VERSUS .20 AND ABOVE

YEAR	SANCTION GROUP	SAMPLE SIZE	NUMBER OF CRASH-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$	NUMBER OF DUI INCIDENT-INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$
2003  (follow-up period = 1 year)	1) BAC below .20	(2,550)	3.57		5.08	
	2) BAC .20 and above	(4,937)	4.17	-14.4%	6.45	-21.2%*

\*  $p = .02$

However, significant differences were apparent between these two groups on DUI incidents, substantiating the fact that those with BAC levels of .20 and above had more DUI incidents in the one-year following their conviction than drivers with BAC levels below .20. These drivers with lower BAC levels had 21.2% fewer DUI incidents than did those with BAC levels of .20 and above. The results of this analysis confirm the earlier suggestion that those with higher BAC levels are more likely to recidivate than those with lower BAC levels, regardless of the length of time of alcohol treatment program. Thus, it may not be that the 6-month programs are less effective than the 3-month programs, but rather that the 6-month programs have a higher proportion of offenders with high arrest BACs, who are more likely to recidivate

Results of the 3-Month and 6-Month Alcohol Education Program Evaluation for First DUI Offenders with BAC Levels of .20 and Above

*Total Crashes and DUI Incidents:* As shown in Table 16d, the length of time of alcohol treatment program for first DUI offenders had no effect on those with BAC levels of .20 and above on both outcome measures, 1-year subsequent crashes and DUI incidents. Although the crash and DUI incident rates for those attending the 3-month program are slightly lower than for those attending the 6-month program, these differences were not significant. Thus, with BAC level held constant, the findings of this analysis indicate that the extended 6-month alcohol treatment program has no beneficial effect on first offenders with high BAC levels on both subsequent 1-year crashes and DUI incidents. While the results of the previous analysis left unclear the relationship between recidivism and length of program or BAC level, the findings from this analysis more clearly indicate that extending the program length for first offenders with high BAC levels does not reduce subsequent 1-year crashes or DUI incidents.

TABLE 16d: FIRST OFFENDER 3-MONTH AND 6-MONTH ALCOHOL EDUCATION PROGRAM EFFECTS ON TOTAL CRASHES AND DUI INCIDENTS FOR DRIVERS WITH BAC LEVELS .20 AND ABOVE

YEAR	SANCTION GROUP (BAC LEVELS .20 AND ABOVE)	SAMPLE SIZE	NUMBER OF CRASH- INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$	NUMBER OF DUI INCIDENT- INVOLVED, PER 100 DRIVERS	PERCENTAGE EFFECT (DIFFERENCE IN FAILURE RATES) $\frac{\text{GRP 1} - \text{GRP 2}}{\text{GRP 2}} \times 100$
2003  (follow-up period = 1 year)	1) 3-month program	(1,343)	3.88		6.17	
	2) 6-month program	(4,937)	4.16	-6.7%	6.33	-2.5%

The effectiveness of increasing the duration of time for alcohol education/treatment programs has not been supported in the literature. DeYoung examined the effectiveness of lengthening SB 38 alcohol treatment programs from 12 to 18 months for second offenders and found no evidence that the additional 6 months contributed to reducing DUI recidivism (DeYoung, 1995). A final limitation of these analyses should be noted. Since this study only included first offenders whose conviction abstract had information on the length of alcohol program, there are probably additional unknown biases that this quasi-experimental design cannot rule out. However, some statistical control of group differences removed part of the biases based on available covariates.

## SECTION 5: ADMINISTRATIVE ACTIONS

Data on DMV administrative license disqualification actions (license suspension or revocation [S/R]) taken in DUI cases are presented below. These statutorily mandated actions, which are taken in cases of alcohol-impaired driving, are initiated by the receipt of either a law enforcement APS report (.08% BAC, zero tolerance, or chemical test refusal) or court abstract of conviction. It should be noted that multiple actions can result from a single DUI incident—for example, a single DUI arrest frequently will result in both an APS suspension and a (later) mandatory postconviction suspension action. This section includes the following tables and figure:

Table 17: Mandatory DUI License Disqualification Actions, 1994-2004. This table shows preconviction (APS) and postconviction license disqualification totals from 1994 through 2004. The postconviction totals include juvenile suspensions, first-offender suspensions, second-offender suspensions and revocations, and third- and fourth-offender revocations.

Table 18: Administrative Per Se Process Measures. This table presents APS process measure data for fiscal years 2002/2003 through 2004/2005.

Figure 11: Mandatory DUI License Disqualification Actions, 1994-2004. This figure graphically portrays mandatory DUI license disqualification totals from 1994 through 2004, both preconviction and postconviction.

The following statements are based on the data shown in the previously listed tables and Figure 11.

- ▶ During 1991, the first full calendar year of APS license suspension, the total number of DMV DUI preconviction and postconviction S/R actions increased by 60% over that for 1990. These totals declined each subsequent year through 1995, and have fluctuated up and down since 1995. After a 3.9% decrease in 2001, S/R actions increased by 2.3% in 2002, increased again by 2.0% in 2003, and decreased by 0.7% in 2004 (see Table 17).
- ▶ In 2003, 171,828 APS license actions were taken. Of these actions, 79% were first-offender actions and 21% were repeat-offender actions (see Table 17).

- ▶ In FY 2004/2005, APS actions decreased by 3.9% from FY 2003/2004, following an 8.8% increase in the previous fiscal year (see Table 18).
- ▶ The number of chemical test refusal actions remained relatively unchanged in 2004, after having increased by 7.1% in 2003. The total number of refusal actions has fallen 30% in the past decade (see Table 17).
- ▶ The number of mandatory postconviction license actions fell by 2.9% in 2004, following a 1.9% decrease in 2003 (see Table 17).
- ▶ In the 14 years since APS was implemented in July 1990, almost three million (2,909,847) APS S/R actions had been taken (see Table 17).
- ▶ Requests for APS hearings have increased from 7.1% of all APS actions in FY 1990/1991 to 28.2% in 2004/2005. The rate at which APS S/R actions are upheld after hearing has increased during the past several fiscal years, from 85.4% upheld in 2002/2003, to 86.4% upheld in 2003/2004, to 86.7% upheld in 2004/2005 (see Table 18).
- ▶ During the first 11.5 years after implementation (on January 1, 1994) of the "zero tolerance" law for minors, 178,109 suspension actions have been taken (see Table 17).

*Figure 11.* Mandatory DUI license disqualification actions, 1994-2004.

30-day suspensions plus 3-month restrictions	1,442	1,465	896
30-day suspensions plus 5-month COE <sup>5</sup> restrictions	20,046	20,961	15,705
First-offender chemical test refusals	5,380	6,039	5,761
CDL first offender suspensions/restrictions	3,160	3,091	2,904
Net APS .08 actions taken for drivers with prior DUI convictions	34,912	36,542	38,022
Suspensions	31,996	33,502	34,769
Revocations	2,916	3,040	3,253
<b>APS Chemical Test Refusal Process Measures:</b>			
Total .08 and .01 APS refusal actions taken (including actions later set aside)	9,234	10,100	10,015
Total .08 refusal actions set aside	627	661	614
Total .01 refusal actions set aside	26	28	24
Net total .08 and .01 APS refusal actions (excluding actions later set aside)	8,581	9,411	9,377
Net total .08 refusal actions	8,296	9,079	9,018
Net total .01 refusal actions	285	332	359
Chemical test refusal rate (excluding actions later set aside)	5.24%	5.26%	5.43%
Net .08 APS refusal (suspension) actions for subjects with no prior DUIs	5,380	6,039	5,761
Net .08 APS refusal (revocation) actions for subjects with prior DUIs	2,916	3,040	3,253
<b>APS Hearings<sup>6</sup></b>			
Total .08 and .01 inperson or telephone APS hearings scheduled	43,539	45,627	52,023
Percentage of total APS actions resulting in a scheduled hearing <sup>7</sup>	24.7%	23.8%	28.2%
.08 hearings held and/or completed	39,073	41,062	47,139
.08 actions sustained/upheld following hearings	33,386	35,476	40,847
Percentage of .08 APS actions sustained/upheld following hearings	85.4%	86.4%	86.7%
.01 hearings held and/or completed	3,724	4,088	4,556
.01 actions sustained/upheld following hearings	3,014	3,411	3,830
Percentage of .01 APS actions sustained/upheld following hearings	80.9%	83.4%	84.1%
<b>APS Chemical Test Refusal Hearings</b>			
Total .08 and .01 APS refusal hearings scheduled	3,084	3,113	3,610
.08 APS refusal hearings held and/or completed	2,944	3,009	3,488
.08 APS refusal actions sustained/upheld following hearings	2,384	2,517	2,963

<sup>1</sup>.08 refers to APS actions taken subsequent to obtaining evidence of a BAC equal to or in excess of the .08% per se level or on the basis of a chemical test refusal. Such an action is taken in conjunction with a DUI arrest.

<sup>2</sup>.01 refers to APS suspensions taken against drivers under the age of 21 with BACs .01% or greater, or on the basis of a chemical test refusal, and are not necessarily taken in conjunction with a DUI arrest.

<sup>3</sup>All entries in this category exclude actions later set aside but, where possible, include actions taken on the basis of either a chemical test refusal or a BAC test result.

<sup>4</sup>Prior DUI convictions or APS actions consist of any such conviction or action where the violation occurred within seven years prior to the current violation.

<sup>5</sup>This restriction allows driving to, from, and during the course-of-employment (enacted 1/1/95).

<sup>6</sup>These figures include refusal hearings but exclude Driver Safety/Investigation hearings, subsequent APS dismissal hearings and departmental reviews.

<sup>7</sup>Both numerator and denominator include those actions later set aside as a result of the hearing.

**SECTION 6: CRASHES INVOLVING ALCOHOL**

This section presents data on alcohol-involved crashes, as compiled and reported by the California Highway Patrol, as well as crash data which have been crosstabulated with Department of Justice DUI arrest data. Only crashes involving injury or fatality are assessed, due to incomplete reporting of property-damage-only (PDO) crashes<sup>1</sup>. Drivers identified as being under the influence of drugs other than alcohol are also included in the "alcohol-involved crash" category, but typically comprise less than 1% of the total (e.g., only 1 case for 2003 data). This section includes the following tables:

Table 19: DUI Arrests Associated with Reported Crashes, 1993-2003. This table shows the number of DUI arrests and the count and percentage of DUI arrests associated with reported crashes from 1993-2003.

Table 20a: Fatal/Injury Crashes of 2003 DUI Arrestees by Race/Ethnicity and Sobriety Code. This table shows the law enforcement officer's determination of sobriety for crash-involved 2003 DUI arrestees, by race/ethnicity.

Table 20b: Fatal/Injury Crashes of 2003 DUI Arrestees by Race/Ethnicity and Type of Arrest. This table portrays the fatal/injury crash involvement of DUI arrestees, by race/ethnicity and type of arrest (felony, juvenile, or misdemeanor).

Table 21: Fatal/Injury Crashes of 2003 DUI Arrestees by Adjudication Status and Sobriety Code. This table crosstabulates crash sobriety codes (from law enforcement crash reports) with the court disposition of the 2003 DUI arrests associated with those crashes.

Table 22: Fatal/Injury Crashes of 2003 DUI Arrestees by Adjudication Status and Type of Arrest. This table displays the adjudication status of fatal and injury crash-involved 2003 DUI arrestees, by type of arrest.

Table 23: 2003 Crash-Involved DUI Arrestees With No Record of Conviction, by County and Type of Arrest. This table shows the number of crash-involved 2003 DUI arrestees without a corresponding recorded conviction, by type of DUI arrest, by county.

Tables 24a-24b: 2003 Alcohol-Involved Fatal/Injury Crashes by Age and Sex (Total and Not Arrested). These two tables show the number of 2003 alcohol-involved fatal and

---

<sup>1</sup>Among 2003 DUI arrests, 26,270 were associated with a reported traffic crash, with 11,198 involving an injury or fatality, and 15,072 were PDO.

injury crashes by age and sex, both total (24a) and those of subjects who were not arrested in conjunction with the crash (24b).

Tables 25a-25b: Sobriety Level by Prior DUI Convictions of 2003 Alcohol-Involved Fatal/Injury Crashes (Total and Not Arrested). These two tables show the number of 2003 alcohol-involved fatal and injury crashes by sobriety level and prior conviction status, both total (25a) and those of subjects who were not arrested in conjunction with the crash (25b).

Tables 26a-26b: 2003 Alcohol-Involved Fatal/Injury Crashes by Prior DUI Convictions (Total and Not Arrested). These two tables show the number of 2003 alcohol-involved fatal and injury crashes by number of prior convictions, both total (26a) and for subjects who were not arrested in conjunction with the crash (26b).

Table 27: 2003 Reported Blood Alcohol Concentration (BAC) Levels of Drivers Involved in Alcohol-Related Crashes. This table shows the mean and frequency distribution of BAC levels for drivers involved in alcohol-related crashes in 2003.

Figure 12 (below) shows the annual percentages of traffic injuries and fatalities that were alcohol-involved from 1994 to 2004. The numerical data for this graph are shown on the DUI summary statistics sheet at the beginning of this report.

*Figure 12.* Percentage of total injuries and total fatalities that were alcohol-involved, 1994-2004.

Based on these data, the following statements can be made:

- ▶ The number of alcohol-involved traffic fatalities increased by 1.2% in 2004, following increases of 2.0% in 2003, 8.3% in 2002, 6.1% in 2001, 5.4% in 2000 and

9.1% in 1999, which had been the first increase in over a decade. The proportion of traffic fatalities which are alcohol-involved increased to 35.7%, after two years of being stable at 34.2% (see Figure 12).

- ▶ The proportion of traffic crash injuries that are alcohol-involved increased to 10.4% in 2004 from 10.2% in 2003 (see DUI Summary Statistics).
- ▶ 14.3% of all 2003 DUI arrests were associated with a reported traffic crash, compared to 15.0% in 2002. 42.6% of these crashes involved an injury or fatality, relatively unchanged from 42.8% in 2002 (see Table 19).
- ▶ In almost a quarter (21.2%) of cases where a DUI offender was arrested in connection with a fatal/injury traffic crash, there is no record of any corresponding conviction. In 85.4% of these nonconvicted cases, the crash report indicated that the drivers had been drinking and that their ability was impaired (see Table 21).
- ▶ Of all 2003 fatal/injury crash-involved DUI arrestees with no record of conviction, 21.3% had been arrested for felony DUI (see Table 22).
- ▶ 6.1% (11,198) of 2003 DUI arrests were associated with a fatal or injury crash. Of these fatal/injury crashes, only 32.1% (3,590) led to an arrest for felony DUI, and only 12.6% (1,411) led to a conviction of felony DUI. 78.8% of DUI arrests stemming from a fatal/injury crash resulted in a reported conviction (see Table 22).
- ▶ Non-arrested drivers in alcohol-involved fatal/injury crashes in 2003 were less likely to have a prior conviction for DUI or alcohol-related reckless driving than did drivers who were arrested in conjunction with the crash (see Tables 25a and 25b).
- ▶ Almost three-quarters (73.2%) of arrested drivers in alcohol-involved fatal crashes had no prior DUI or reckless driving conviction (see Table 26a).

## DATA SOURCES AND LIMITATIONS

### DUI Arrest Data:

Arrest data are reported to the Department of Justice (DOJ), Law Enforcement Information Center, by individual law enforcement agencies throughout the state. As such, these data are subject to reporting errors such as incorrect names, birthdates or arrest dates. Nonreporting of arrest data due to error or omission can also occur; for example, in 1995 the Oakland Police Department reported no DUI arrests, after reporting 960 such arrests in 1994. In addition, when data are entered into DOJ's Monthly Arrest and Citation Register (MACR) system, only the highest-order offense is included. Therefore, in cases where a DUI arrest is made in conjunction with, for example, an auto theft arrest, that DUI arrest will not be included in the database. This results in a slight but systematic underreporting of the number of DUI arrests annually.

### DUI Conviction Data:

Abstracts of conviction for DUI and other traffic-related offenses are reported to the DMV by courts throughout the state. As abstracts are received (either hard copy, magnetic tape or through direct electronic access from the courts) they are entered onto the DMV driver record database. Abstracts without an identifying driver license number are run through the automated name index (ANI) system in order to match the abstract with an existing driver record; in cases where no such match can be made, an "X"-numbered record is created to store the abstract. The total number of DUI abstracts of conviction received by DMV from the courts is tallied monthly and annually. Since this workload total includes abstracts which amend, correct or dismiss prior abstracts of conviction, it tends to overestimate the actual number of convictions which have occurred. Conviction data are also subject to reporting and nonreporting errors similar to those for DUI arrests. For example, the 1993 Annual Report of the California DUI Management Information System documented the fact that thousands of DUI convictions appearing in court records do not appear on the DMV driver record database.

### Alcohol-Involved Crash Data:

Crash data are reported to the California Highway Patrol (CHP) by local law enforcement agencies and district offices of the CHP. As such, these data are subject to reporting and nonreporting errors similar to those occurring in both DUI arrest and conviction data. While most local law enforcement agencies will investigate and file reports on crashes involving injury or death, the investigation and reporting of property-damage-only crashes varies widely by local jurisdiction. Data are entered onto CHP's Statewide Integrated Traffic Records System (SWITRS) and published in annual reports.

---

## HISTORY OF MAJOR DUI LAWS IN CALIFORNIA SINCE 1975

SB 207 (Scott), effective 1/1/2006, establishes a statewide administrative vehicle impoundment program for repeat DUI offenders, when the driver's BAC level is 0.10 percent or more by weight, or when the driver refuses to submit to a chemical test. If the driver has one prior DUI conviction within the past 10 years, his/her vehicle shall be impounded for 5 days, and if the driver has two or more prior DUI convictions within the past 10 years, his/her vehicle shall be impounded for 15 days.

SB 547 (Cox), effective 1/1/2006, establishes a pilot program in Sacramento County that would authorize a peace officer to impound a person's vehicle for up to 30 days, if the driver has one or more prior DUI convictions within the past 10 years. Vehicle impoundment will take place in combination with a DUI intervention program established by the county. This bill shall remain operative until January 1, 2009, and would require the county to report the effectiveness of the pilot program to the Legislature.

SB 571 (Levine), effective 1/1/2006, lowers the blood alcohol level (BAC) at which the court must consider enhanced penalties from 0.20% to 0.15%, if a person is convicted of DUI.

AB 979 (Runner), effective 1/1/2006, reduces the mandatory suspension/revocation period, from a 12 to 30 month range to 12 months for repeat DUI offenders, before they become eligible to obtain a restricted driver's license. The license restriction requires the installation of an ignition interlock device (IID). This bill allows for a mandatory 30-day vehicle impoundment period if a person is operating the vehicle in violation of the ignition interlock device restriction.

AB 1353 (Liu), effective 9/20/2005, increases the duration of alcohol treatment programs from 6 to 9 months (consisting of at least 60 hours of program activities) for first DUI offenders, who are granted probation, and whose blood alcohol content (BAC) is 0.20% or greater, or who refuse to take a chemical test.

SB 1694 (Torlakson), effective 1/1/2005, increases the time period from seven to ten years during which arrests and/or convictions of DUI will be counted as prior offenses for enhanced penalties (includes DUI convictions of persons under age 21). This new law also requires the court to order a person convicted of a prior DUI to complete an alcohol/drug problem assessment program, even though that prior conviction occurred more than ten years ago, and authorizes the court to order the

person to complete a repeat offender treatment program. Finally, it expands court-ordered participation in a county alcohol/drug assessment program to all persons convicted of a repeat DUI offense within ten years of a prior offense.

SB 1696 (Torlakson), effective 1/1/2005, requires the alcohol treatment program providers to send proof of enrollment in, or proof of completion of, the programs directly to DMV Headquarters, and prohibits the DMV from receiving the certificates from program participants.

SB 1697 (Torlakson), effective 9/20/2005, assigns sole responsibility for imposing driver license actions for DUI arrests and convictions to DMV, and removes this responsibility from the courts. It also ensures that all persons convicted of a DUI will receive a license restriction, suspension or revocation of the driving privilege.

SB 408 (Torlakson), effective 1/1/2004, prohibits the DMV (for cases showing a “critical need to drive”) from issuing a restricted drivers license to minors convicted of DUI with a BAC of 0.01% or greater if the minor has other zero tolerance or DUI convictions within seven years of the current violation.

AB 1078 (Jackson), effective 1/1/2002, removes the 10-year limit on certain vehicular manslaughter convictions, resulting in the permanent retention of these violations on the driver’s record. These convictions would be considered by the court as “priors” for enhancing penalties upon subsequent conviction for DUI.

AB 803 (Torlakson), effective 1/1/2001, requires the court to order a person who is at least 18 years of age who is convicted of a first violation of DUI with 0.05% or more, by weight, of alcohol to attend the educational component of a licensed DUI program; upon a second or subsequent conviction, the court is required to order the person, in addition to other penalties, to attend a 30-hour DUI program. If the person’s license is suspended, the DMV cannot reinstate the driving privilege until the person provides proof of having completed the program as specified.

AB 1650 (Assembly Transportation Committee), effective 1/1/2000, is a committee bill intended to deal with transportation issues more efficiently by clarifying and making technical changes. This bill authorizes the DMV to impose a driver license suspension on those convicted of DUI in a water vessel involving injury; this remedies an oversight in existing law which provides for sanctions against drivers convicted of DUI in a water vessel without injury, but does not specify sanctions for cases involving injury.

AB 762 (Torlakson), effective 7/1/99, extends the suspension period for a second-DUI offender from 18 months to two years, but allows the second offender to serve 12 months of the license suspension period, followed by a restricted license, with continued enrollment in a treatment program and installation of an ignition interlock device; requires persons convicted of driving with a suspended or revoked license, where that suspension or revocation was based on prior DUI convictions, to install the ignition interlock device for a period not to exceed three years or until the driving privilege is reinstated, and requires DMV to study and report on the effectiveness of these devices. Judges are also encouraged to order installation of an ignition interlock device for first-time DUI offenders if there are aggravating factors such as high blood alcohol readings (0.20% or above), chemical test refusal, numerous traffic violations, or injury crashes. This law requires that upon a first DUI conviction, if a court grants probation, 1) the person's driving privilege shall be suspended for six months by the DMV, in addition to other penalties, or 2) the person may operate a motor vehicle restricted for 90 days, to and from work and alcohol treatment program, if the person establishes proof of financial responsibility and complies with other penalties and fees.

SB 24 (Committee on Public Safety), effective 7/1/99, cleans up AB 762, AB 1916, and SB 1186. This law requires the DMV to revoke for one year the driving privilege of any ignition interlock device-restricted driver who is convicted of driving a vehicle not equipped with an ignition interlock device (IID) under authority section 23247(g); requires the department to suspend or revoke the driving privilege of any IID-restricted driver [under section 23246(g)] if notified by an installation facility that the driver attempted to bypass, tamper with or remove the device, or has three or more times failed to comply with calibration or servicing requirements of the device; amends certain sections to specify that completion of a program equals enrollment, participation, and completion subsequent to the date of the current violation.

SB 1186 (Committee on Public Safety), effective 7/1/99, reorganizes specified provisions relating to DUI-related statutes by amending, repealing, and/or renumbering the DUI-related sections without making substantive changes to the statutes.

SB 1176 (Johnson), effective 1/1/99, requires that, upon a conviction of an alcohol-related reckless driving charge, the courts order enrollment in an alcohol and drug education program as a condition of probation. This bill also requires an evaluation

by the DMV of the effectiveness of the program and a discussion of the findings in its annual report to the Legislature.

SB 1890 (Hurt), effective 1/1/99, deletes the choice of the urine test from the options for chemical tests relating to operating a vehicle under the influence of alcohol, unless both the blood and breath tests are unavailable or where there is a condition that warrants the use of the urine test.

AB 1916 (Torlakson), effective 1/1/99, provides that the court shall, as a condition of probation, refer a first offender whose BAC level is less than 0.20%, by weight, to participate for at least three months (minimum 30 hours) or longer to a licensed education/counseling program; if the BAC level is equal to 0.20% or more, by weight, or the person refused to take a chemical test, the court shall order the person to participate for at least six months or longer in a program consisting of 45 hours of education/counseling activities; requires the DMV to submit an annual report to the Legislature on the efficacy of the increased drug and alcohol intervention programs; requires repeat offenders who have twice failed the programs to participate in a county alcohol and drug problem assessment program, and requires each county, beginning 1/1/2000, to prepare, or contract to be prepared, an alcohol and drug assessment report on each person ordered by the court to participate in an alcohol and drug assessment program.

AB 130 (Battin), effective 1/1/98, requires that any person guilty of a felony or misdemeanor DUI within 10 years of a prior felony offense be designated as a habitual traffic offender for a 3-year period and have their driver license revoked for four years.

SB 1177 (Johnson), effective 1/1/98, requires that anyone convicted of a second or subsequent DUI within seven years of a separate DUI, alcohol-related reckless driving, or DUI with bodily injury violation, is ordered to enroll in, participate and complete a DUI treatment program, subject to the latest violation, as a condition of probation. The person is not to be given credit for any treatment program activities prior to the date of the current violation.

AB 1985 (Speier), effective 1/1/97, cited as "Courtney's Law"; provides that a person convicted of gross vehicular manslaughter while intoxicated and who has one or more prior convictions of vehicular manslaughter or multiple prior DUI convictions shall be punished by imprisonment in the state prison for a term of 15 years to life. Also, any person fleeing the scene of a crime after committing specified vehicle

---

offenses which resulted in death, serious injury, or great bodily injury is subject to an additional 5-year prison enhancement.

SB 1579 (Leonard), effective 1/1/97, permits DMV to suspend a driver license on a first FTA for DUI, and establishes an enhanced audit and tracking system to compare DUI arrests with subsequent actions.

SB 833 (Kopp), effective 1/1/96, permits peace officers to seize and cause the removal of a vehicle, without arresting the driver, when the vehicle was being operated by a person whose driving privilege was suspended or revoked or who had never been issued a license; requires an impounding agency to send a notice by certified, return receipt requested mail, to the legal owner of a vehicle that is impounded, and specifies under what conditions an impounded vehicle may be released to the legal owner.

AB 321 (Connolly), effective 1/1/95, allows juveniles cited for driving under the influence, with a BAC of 0.05% or more, by weight (Section 23140), to be charged with vehicular manslaughter (Penal Code (PC) 192) or gross vehicular manslaughter (PC 191.5) if they violate these vehicular manslaughter laws.

SB 1295 (Lockyer), effective 1/1/95, requires every person convicted of a first DUI offense to submit proof of completion of a treatment program within a time period set by the department; requires the department to suspend the driving privilege for noncompliance, prohibits reinstatement until proof of completion is received by the department; enhances the required administrative driving privilege revocation for a minor who refuses to take or fails to complete a preliminary alcohol screening (PAS) test, to two years revocation for the second offense in seven years and three years revocation for the third and subsequent offenses; applies the CVC section 23140 to drivers under age 21 (previously under age 18), making it unlawful to drive with a 0.05% BAC level or greater.

SB 1758 (Kopp), effective 1/1/95, permits a noncommercial driver, 21 years of age or older, who was arrested for a first APS DUI offense, who took a chemical test, and enrolled in an alcohol treatment program, to also obtain a restricted driver license, valid for driving to and from and during the course of that person's employment, after serving 30 days of the suspension period. The total time period for suspension/restriction shall be six months, rather than four months. Suspended/revoked and unlicensed drivers who drive are subject to having their vehicles towed and impounded for 30 days. If the driver is the registered owner of

the vehicle and has a prior conviction for driving while unlicensed or suspended/revoked, the vehicle is subject to forfeiture to local authorities.

AB 2639 (Friedman), effective 9/30/94, repeals the statutes which authorized discretionary IID orders (23235), although part of the repealed statutes were incorporated into the sections establishing mandatory orders (section 23246 et seq.). Previously, the discretionary IID orders applied to all DUI offenders, but now they apply only to first-DUI offenders. For third and subsequent offenders, the statutes are amended to clarify that the court must require proof of installation of the device before issuing an order granting a restricted license. Some of the exemptions to the IID orders were revised.

SB 126 (Lockyer), effective 1/1/94, amends CVC 23161 to provide that if the court orders a 90-day restriction for a first offender, the restriction shall begin on the date of the reinstatement of the person's privilege to drive following the 4-month administrative suspension; as part of the sentencing of repeat-DUI offenders, 23161 requires an ignition interlock device to remain on the vehicle for one to three years after restoration of the driving privilege; specifies that the person cannot operate a motor vehicle when the driving privilege is suspended or revoked even if the vehicle is equipped with an ignition interlock device; requires second offenders who have been suspended for 18 months to provide proof of financial responsibility and proof of successful completion of an alcohol or drug program in order to reinstate their license privilege, includes violation of 23140 for administrative suspension for minors driving with 0.05% BAC or greater.

SB 689 (Kopp), effective 1/1/94, prohibits a person under 21 years of age from driving with a BAC of 0.01% or greater, as measured by a PAS test; violators receive a 1-year license suspension. A person under the age of 21 who refuses the PAS test will be suspended for one year.

AB 2851 (Friedman), effective 7/1/93, requires anyone convicted of a second DUI within seven years of a prior conviction to install an IID on all their vehicles. The device must be maintained for a period of one to three years. Proof of installation must be provided to the court or probation officer within 30 days of conviction. If proof is not provided, the DMV will revoke the license for one year. Exceptions to installing a device are for medical problems, use of vehicle in emergencies, and driving the employer's vehicle during employment.

- AB 3580 (Farr), effective 7/1/93, changes the effective date of APS suspension from 45 to 30 days after the notice is given.
- SB 1600 (Bergeson), effective 9/26/92, provides that DMV is required to suspend or revoke the licenses of those who drop out of an alcohol treatment program a second time.
- AB 37 (Katz), effective 1/1/92, combines elements of the formal and informal review hearing into a single hearing for those who were suspended under the APS laws, and provides that DMV need not stay a suspension or revocation pending review, if the hearing followed suspension or revocation for refusing a chemical test for alcohol or for driving with a BAC of 0.08 % or more.
- SB 185 (Thompson), effective 1/1/92, amends Section 14602 to authorize the court to order the motor vehicle impounded for up to six months for a first conviction, and up to 12 months for a second or subsequent conviction of any of the following offenses: driving with a suspended or revoked license, violation of 2800.2 or .3 (evading a peace officer in a reckless manner, causing injury or death), within seven years of a violation of 23103, 23152, 23153, or PCs 191.5 or 192(c).
- AB 2040 (Farr), effective 9/28/90, repeals previous statutes authorizing the installation of ignition interlock devices in DUI cases. This urgency statute authorizes the installation of such devices in all DUI cases, permits the court to grant subjects revoked for 3 or more DUI-related violations a restricted license after 24 months of the revocation have passed. The restricted license is conditioned on satisfactory completion of 18 months of an alcohol treatment program, submission of proof of financial responsibility, and agreement to have an ignition interlock device installed in their vehicles. Courts are authorized to reduce the minimum DUI fine to allow the person to pay the costs of the device.
- SB 1150 (Lockyer), effective 7/26/90, provides clean-up legislation for APS; lowers the BAC level from .10 to .08, requires proof of financial responsibility to reinstate from any APS suspension or revocation action, increases sanctions for implied consent refusals (1-year license suspension for no priors or APS actions, 2-year license revocation for one prior or APS action, and 3-year revocation for two or more prior DUI offenses or APS actions), and authorizes suspension or revocation actions taken under 13353 and 13353.2 CVC to be considered as priors.

SB 1623 (Lockyer), effective 7/1/90, establishes authority for a peace officer to serve a notice of suspension or revocation (administrative per se or APS) personally on a person arrested for a DUI offense, to take possession of the driver license for forwarding to the department, and to issue a 45-day temporary operating permit; provides for an administrative review of the order, for an administrative hearing, and for a judicial review of the hearing, and provides for a fee, not to exceed \$100, to be assessed upon the return of the driver license.

AB 757 (Friedman), effective 1/1/90, requires the DMV to establish and maintain a DUI data and recidivism tracking system to evaluate the efficacy of intervention programs for persons convicted of DUI. Annual reports are to be made to the Legislature.

SB 310 (Seymour), effective 1/1/90, authorizes the courts to sell the vehicles of those registered owners who are found in violation of PCs 191.5 or 192 (C3), CVC 23152 which occurred within seven years of two or more convictions of 23152 or 23153, or a violation of 23153 which occurred within seven years of one or more convictions of 23152 or 23153 or the cited PC sections.

SB 408 (Leonard), effective 1/1/90, modifies AB 7 (Hart) to establish a BAC level of .08% or higher as per se evidence of impaired driving.

SB 1119 (Seymour), effective 1/1/90 for vessel provisions and 1/1/92 for commercial driver provisions, prohibits the operation of a commercial vehicle by a person with a BAC of .04% or above; requires a commercial vehicle driver to be ordered out of service for 24 hours if found with a BAC at or above .01%, but less than .04%; establishes separate penalties for refusing to take or complete a chemical test based on the type of vehicle involved. Under this bill, a conviction of operating a vessel while under the influence of alcohol or drugs would also be treated as a DUI prior for driver license sanctions.

SB 1344 (Seymour), effective 1/1/90, requires statewide implementation of 12-week (30-hour) first-offender alcohol education and counseling programs, and requires state licensing of such programs. This bill also adds 6 months of monitoring and follow-up to second offender programs, resulting in 18-month programs. It requires that DMV evaluate program effects on recidivism and report the findings to the Legislature.

SB 1902 (Davis), effective 1/1/90, prohibits DMV from issuing or renewing a driver license unless the applicant agrees in writing to comply with a blood, breath, or urine test. This bill also designates drivers convicted of a third or subsequent DUI within seven years as “habitual traffic offenders.”

AB 3134 (Harris), effective 1/1/89, allows the 4th DUI within seven years to be charged as a felony or misdemeanor. The term of imprisonment to state prison or county jail is not less than 180 days and not more than one year. Allows for second offenders to attend either a one year or 30-month treatment program.

AB 3563 (Killea), effective 1/1/89, authorizes the court to order DMV to suspend, revoke, or delay the driving privilege of a minor failing to show proof of completion of a court-ordered alcohol education program when convicted of CVC 23140.

SB 1300 (Campbell), effective 1/1/89, amends CVC 13202.5 to allow courts to suspend the license of a person under the age of 21 (changed from age 18) for one year, or delay the driving privilege of those 13 years or older, upon conviction of various alcohol and drug offenses, including open container violations.

SB 1964 (Robbins), effective 1/1/89, requires all first-DUI offenders to file proof of insurance when applying for a restricted license or for reinstatement of the driving privilege following a period of license suspension.

SB 885 (Royce), effective 1/1/88, requires that a person who was granted probation for a second DUI offense must show proof of financial responsibility in order to be eligible for the 1-year restricted license.

SB 1365 (Seymour), effective 1/1/88, establishes a 30-month alcohol treatment program as an alternative to the 12-month program for third and subsequent DUI offenders, in counties where such a program exists. In these cases, imprisonment in the county jail shall be imposed for at least 30 days, but not more than one year, in lieu of the 120-day minimum jail term.

AB 2558 (Duffy), effective 1/1/87, provides that gross vehicular manslaughter while intoxicated is punishable in the state prison for 4, 6, or 10 years. Former PC 192(c3) was deleted and incorporated into 191.5(a).

AB 2831 (Killea), effective 1/1/87, makes it unlawful for a minor to drive with a BAC of .05% or more (CVC 23140). A conviction of this violation requires completion of an alcohol education program or alcohol-related community service program.

SB 2206 (Watson), effective 1/1/87, authorizes a county to develop and administer an alcohol and drug problem-assessment program, which could include a pre-sentence alcohol and drug problem-assessment report for persons convicted under CVC 23152 or 23153, and referral to treatment program with follow-up tracking.

SB 2344 (Lockyer), effective 1/1/87, extends the sentencing period for prior DUIs from five to seven years, and specifies a 3- to 5-year probation term for a DUI conviction.

SB 3939 (Farr), effective 1/1/87, authorizes courts to order the installation of IID for repeat offenders in four counties, and establishes a pilot project to evaluate the effectiveness of the devices.

SB 925 (Seymour), effective 7/1/86, extends the period of license suspension for second-misdemeanor offenders from one year to 18 months, and also requires that offenders with three or more DUI convictions show proof of treatment completion in order to have their licenses reinstated.

AB 144 (Naylor), effective 9/29/85, requires the court to take into consideration in a DUI case a blood alcohol concentration of 0.20 percent or above, or a refusal to take a chemical test, as special factors in the enhancing of penalties for sentencing or to impose additional terms and conditions of probation.

SB 1441 (Petris), effective 1/1/85, requires a 3-year license revocation for persons with two or more DUI or alcohol-related reckless convictions within five years of refusing a chemical test.

SB 1522 (Alquist), effective 1/1/85, retains existing law for first offenders, which authorizes courts to impound a vehicle at the registered owner's expense for up to 30 days if the driver was convicted of DUI pursuant to CVC 23152 or 23153. The same time period for impoundment is required for second offenses within five years. For third and subsequent offenses, the vehicle can be impounded at the registered owner's expense for up to 90 days. Exceptions to the required impoundment arise "where the interests of justice would best be served by not ordering impoundment." Another limitation is that no vehicle driven by a class 3 or

4 licensee is subject to impoundment if another person has a community property interest in the vehicle, and it is the only vehicle available to the driver's family.

AB 624 (Moorhead), effective 1/1/84, requires a 1-year license revocation for minors (up to age 18) for a DUI conviction (Sections 23152, 23153 CVC).

SB 1601 (Sieroty), effective 7/1/82, modifies AB 541 provisions by requiring that SB 38 participants establish proof of insurance in order to remove the license restriction at the end of six months. In addition, SB 38 participants who dropped out of the program are given two more opportunities to reenroll, instead of receiving an immediate license suspension. Program providers are also required to report dropouts directly to DMV.

AB 7 (Hart), effective 1/1/82, makes it a misdemeanor under CVC 23152(b) to drive a vehicle with a BAC level of .10% or higher. Drivers with lower BAC levels (.05 - .09%) can be convicted of DUI when sufficient behavioral evidence of impairment is apparent.

AB 541 (Moorhead), effective 1/1/82, establishes that under CVC 23152(a), driving under the influence of an alcoholic beverage or drugs or their combined influence is a misdemeanor, while felony charges are filed under CVC 23153, and alcohol-related reckless charges are filed under CVC 23103.5. A conviction under 23103.5 constitutes a prior for a second offense (but not for third offenses). The penalties imposed are a 90-day license restriction (work- and treatment-related driving only) and referral to an alcohol education program for most first offenders; a 1-year license restriction for second offenders who enroll in an approved 12-month alcohol treatment (SB 38) program. First offenders not placed on probation receive a 6-month license suspension. Second offenders not assigned to an alcohol program are suspended for one year. A minimum jail term of 48 hours is mandatory for all repeat offenders, and a minimum fine of \$390 is assessed for all DUI offenses. Offenders with three or more DUI or alcohol-related reckless driving convictions receive a 3-year license revocation along with a jail term and fine, and a small proportion are referred to a 12-month SB 38 program. Enrollment in the program cannot be substituted for license revocation. The period defining prior DUIs changes from seven to five years. Convictions of a DUI offense with bodily injury or fatality, when prosecuted as a felony, continue to result in more severe penalties (such as longer license actions and jail terms) than the misdemeanor offenses. The only change in the 1982 law for felony second offenders is that those participating in

the SB 38 program will receive a license suspension for one year and a license restriction for two years.

SB 38 (Gregorio), effective 1/1/78, extends the pilot 12-month alcohol treatment program for repeat offenders statewide.

SB 330 (Gregorio), effective 1/1/76, permits repeat DUI offenders in four counties to participate in a 12-month pilot alcohol treatment program in lieu of the usual 12-month suspension or 3-year revocation.

## GLOSSARY

### ADMINISTRATIVE PER SE (APS)

Administrative per se ("on-the-spot") license suspension or revocation occurs immediately pursuant to lawful arrest of a person driving with a blood alcohol concentration (BAC) of 0.08% or more, or one who refuses a chemical test. Upon arrest, the driver's license is immediately confiscated by the law enforcement officer and an order of suspension or revocation served. The driver is issued a temporary license and allowed due process through administrative review. In July 1990, California became the 28th state to implement APS. In January 1994, California enacted a "zero tolerance" statute which requires the administrative suspension of any driver under age 21 with a BAC of 0.01% or greater, or who refuses to be tested.

### ALCOHOL-INVOLVED CRASH

Alcohol-involved crashes are those in which the investigating law enforcement officer indicates on the crash report that the driver "had been drinking (HBD)." Crashes involving drivers who are determined to be under the influence of drugs other than alcohol (typically less than 1% of all crashes) are also included in the alcohol-involved crash category.

### ALCOHOL-RELATED RECKLESS DRIVING

Commonly called a "wet" reckless, alcohol-related reckless driving refers to an arrest/conviction incident which originated as a DUI arrest. DUI arrests involving drugs which are reduced to reckless driving are also referred to as alcohol-involved or "wet" reckless driving. "Wet" reckless convictions count as priors for the purposes of enhanced penalties upon subsequent conviction of DUI.

### ALPHA

Alpha is the investigator's acceptable risk or probability level of making a Type 1 error (generally chosen to be small—e.g., 1% or .01, 5% or .05). There is always some risk of a Type 1 error, so alpha cannot be zero. Alpha is also called the significance level, because it is the criterion for claiming statistical significance.

### BAC

Blood alcohol concentration, or BAC, is a measure of the percent, by weight, of alcohol in a person's blood. Statutorily, BAC is based upon grams of alcohol per 100 milliliters of blood or per 210 liters of breath.

### CONVICTION

Conviction of an offense, as used in this report, refers to the receipt by DMV of a court abstract of conviction. In a small proportion of cases, an offender may be

convicted of an offense but that conviction is not reported to DMV. Such cases would functionally be treated by DMV as though the offender had not been convicted. Because convictions can be amended, corrected, dismissed or simply not reported at all, the conviction totals reported herein are dynamic and subject to change.

### COVARIATE

A variable used to statistically adjust the results of an analysis for differences (on that variable) existing among subjects prior to the comparison of treatment effects.

### DUI

DUI is an acronym for "driving under the influence" of alcohol and/or drugs, a violation of Sections 23152 or 23153 of the California Vehicle Code.

### LOGISTIC REGRESSION

Logistic regression analysis is a statistical procedure evaluating the linear relationship between various factors and the occurrence or nonoccurrence of an outcome event. In this study, the procedure was used to explain the relationship between the various sanctions and the proportion of DUI offenders who incurred crashes and/or DUI incidents.

### MAJOR CONVICTION

Major convictions include primarily DUI convictions, but also reckless driving and hit-and-run convictions.

### *p*

*p* stands for probability. For example, if  $p < .05$ , the probability is less than 5 chances in 100 that the difference you found is by chance alone.

### QUASI-EXPERIMENTAL DESIGNS

Quasi-experimental designs refer to analyses where the comparison groups are not equivalent on characteristics other than the treatment conditions because random assignment was not used. Caution should be exercised when interpreting the results because of possible confounding of group bias with treatment effects. Covariates are used to statistically reduce group differences prior to the comparison of treatment effects.

### SIGNIFICANT (STATISTICALLY)

If the result of a statistical test is significant, this means that the difference found is very unlikely by chance alone. How unlikely is determined by alpha.

## APPENDIX A

Assembly Bill No. 757

### CHAPTER 450

An act to add Section 1821 to the Vehicle Code, relating to driving offenses.

(Approved by Governor September 14, 1989. Filed with Secretary of State September 15, 1989.)

#### LEGISLATIVE COUNSEL'S DIGEST

AB 757, Friedman. Driving offenses: intervention programs: evaluation.

Under existing law, the Department of Motor Vehicles maintains records of driver's offenses reported by the courts. Including violations of the prohibitions against driving while under the influence of an alcoholic beverage, any drug, or both, driving with an excessive blood-alcohol concentration, or driving while addicted to any drug.

This bill would, additionally, require the department to establish and maintain a data and monitoring system, as specified, to evaluate the efficacy of intervention programs for persons convicted of those violations relating to alcohol and drugs, and to report thereon annually to the Legislature.

The bill would declare legislative findings.

The people of the State of California do enact as follows:

SECTION 1. The Legislature finds and declares as follows:

(a) Drivers under the influence of drugs or alcohol continue to present a grave danger to the citizens of this state.

(b) The Legislature has taken stern action to deter this crime and punish its offenders and has provided a range of sanctions available to the courts to use at their discretion.

(c) No system exists to monitor and evaluate the efficacy of these measures or to determine the achievement of the Legislature's goals.

(d) This lack of accurate and up-to-date comprehensive statistics hampers the ability of the Legislature to make informed and timely policy decisions.

(e) It is essential that the Legislature acquire this information, from available resources, as soon as practicable, and that this information be updated and transmitted annually to the Legislature.

SEC. 2. Section 1821 is added to the Vehicle Code, to read:

1821: The department shall establish and maintain a data and monitoring system to evaluate the efficacy of intervention programs for persons convicted of violations of Section 23152 or 23153.

The system may include a recidivism tracking system. The recidivism tracking system may include, but not be limited to, jail sentencing, license restriction, license suspension. Level I (first offender) and II (multiple offender) alcohol and drug education and treatment program assignment, alcohol and drug education treatment program readmission and dropout rates, adjudicating court, length of jail term, actual jail or alternative sentence served, type of treatment program assigned, actual program compliance status, subsequent

accidents related to driving under the influence of alcohol or drugs, and subsequent convictions of violations of Section 23152 or 23153.

The department shall submit an annual report of its evaluations to the Legislature. The evaluations shall include a ranking of the relative efficacy of criminal penalties, other sanctions, and intervention programs and the various combinations thereof.
